### **Investigating Climate Science in the 7-12 Classroom**

Laura Tucker, Lois Sherwood, 2026-03-17 An updated and enhanced version of the popular NSTA Press book *Understanding Climate Change*, this practical curriculum allows you to engage your students in understanding one of the most key topics in science education. The ten-session unit provides extensive background information and step-by-step instructions for teaching this topic effectively within your existing curriculum. Each session uses three-dimensional methods to cover a different area of climate science: global warming and environmental change. The authors include scaffolding suggestions, alignment with Next Generation Science Standards, and guidance on best practices for teaching this complex topic as either a four-week stand-alone unit or within your other chemistry, biology, or environmental science lessons. This update includes interviews with current climate change agents sharing stories of their work, career pathways, and what gives them hope for the future. Together, the sessions provide a strong foundation for understanding the science behind the greenhouse effect and climate change. It encourages your students to conduct their own scientific research, develop conclusions, discuss ripple effects, and examine solutions leading to actions students can take on their own or as a group. Ideal for middle and high school science teachers, both new and veteran, this field-tested unit helps you engage your students in climate change learning while providing them with a hopeful outlook for their future.

### **Investing in Science**

Massimo Florio, 2019-10-15 A proposal for using cost-benefit analysis to evaluate the socioeconomic impact of public investment in large scientific projects. Large particle accelerators, outer space probes, genomics platforms, all are scientific enterprises managed through the new form of the research infrastructure in which communities of scientists collaborate across nations, universities, research institutions, and disciplines. Such large projects are often publicly funded with no accepted way to measure the benefits to society of these investments. In this book, Massimo Florio suggests the use of cost-benefit analysis (CBA) to evaluate the socioeconomic impact of public investment in large and costly scientific projects. The core concept of CBA of any infrastructure is to undertake the consistent intertemporal accounting of social welfare effects using the available information. Florio develops a simple framework for such accounting.

in the research infrastructure context and then offers a systematic analysis of the benefits in terms of the social agents involved. He measures the benefits to scientists, students and postdoctoral researchers, the effect on firms of knowledge spillovers, the benefits to users of information technology and science based innovation, the welfare effects on the general public of cultural services provided by RIs and the willingness of taxpayers to fund scientific knowledge creation. Finally Florio shows how these costs and benefits can be expressed in the form of stochastic net present value and other summary indicators.

*Neuromodulation* Elliot Krames, P. Hunter Peckham, Ali R. Rezai, 2018-01-05. *Neuromodulation: Comprehensive Textbook of Principles, Technologies and Therapies*, Second Edition serves as a comprehensive and in depth reference textbook covering all aspects of the rapidly growing field of neuromodulation. Since the publication of the first edition seven years ago there has been an explosion of knowledge in neuromodulation, optogenetics, bioelectronics, medicine and brain computer interfacing. Users will find unique discussions of the fundamental principles of neuromodulation and therapies and how they are applied to the brain, spinal cord, peripheral nerves, autonomic nerves and various organs. The book focuses on comprehensive coverage of spinal cord stimulation, non-interventional and interventional brain stimulation, peripheral nerve stimulation and the emerging fields of neuromodulation including optogenetics and bioelectronics medicine. Provides a comprehensive reference that covers all aspects of the growing field of neuromodulation. Written by international leading authorities in their respective fields of neuromodulation, pain management, functional neurosurgery and biomedical engineering. Includes new chapters on optogenetics, bioelectronics, medicine and brain computer interfacing.

Essentials of Research Methods in Education Scott Buckler, Harriett Moore, 2026-03-01. This book provides pragmatic advice and guidance on how to undertake educational research. Using the concept of research as a quest, it takes you on a journey from planning stages through data collection to analysis to writing up your findings and at each stage exploring the principles and practice that can support your own research projects. This second edition has been carefully revised throughout to offer a more logical structure and better signposting of key topics to support your understanding of the research process. Important ethical considerations throughout to demonstrate how research ethics are vital at every step. Engaging and thought provoking commentaries on how to progress in your research quest. Enhanced granular detail on different methodological approaches. This is essential reading for students on all education courses that include a research methods module or project.
