Rethinking Medical Humanities Rinaldo F. Canalis, Massimo Ciavolella, Valeria Finucci, 2022-12-19 Medical Humanities may be broadly conceptualized as a discipline wherein medicine and its specialties intersect with those of the humanities and social sciences As such it is a hybrid area of study where the impact of disease and healing science on culture is assessed and expressed in the particular language of the disciplines concerned with the human experience However as much as at first sight this definition appears to be clear it does not reflect how the interaction of medicine with the humanities has evolved to become a separate field of study In this publication we have explored through the analysis of a group of selected multidisciplinary essays the dynamics of this process The essays predominantly address the interaction of literature philosophy art art history ethics and education with medicine and its specialties from the classical period to the present Particular attention has been given to the Medieval Early Modern and Enlightenment periods To avoid a rigid compartmentalization of the book based on individual fields of study we opted for a fluid division into multidisciplinary sections reflective of the complex interactions of the included works with medicine *Microfoundations of Evolutionary Economics* Yoshinori Shiozawa, Masashi Morioka, Kazuhisa Taniguchi, 2019-06-27 This book provides for the first time the microfoundations of evolutionary economics enabling the reader to grasp a new framework for economic analysis that is compatible with evolutionary processes Any independent approach to economics must include a value theory or price theory and price and quantity adjustment processes Evolutionary economics has rightly and successfully concentrated its efforts on explaining evolutionary processes in technology and institutions However it does not have its own value theory and is not capable of explaining the workings of everyday economics processes in which any evolutionary process would take place Our point of departure is the addition of myopic agents with severely limited rational and forecasting capacities in stark contrast to mainstream economics We show how myopic agents in a complex world can produce a stable price system and demonstrate how they can adjust their production to changing demand flows Agents behave without any knowledge of the overall process and they generate a stable economy as large as the global network of exchanges This is the true miracle of the market mechanism In contrast to mainstream general equilibrium theory this miracle can be explained without the need for an auctioneer or infinitely rational agents Thanks to this book evolutionary economics can now claim to be an independent approach to economics that can completely replace mainstream neoclassical economics Foundations of Psychological Thought Barbara F. Gentile, Benjamin O. Miller, 2009 In addition to extensive annotations this reader on the
