*Automation and Autonomy* James Steinhoff, 2021-06-21 This book argues that Marxist theory is essential for understanding the contemporary industrialization of the form of artificial intelligence AI called machine learning It includes a political economic history of AI tracking how it went from a fringe research interest for a handful of scientists in the 1950s to a centerpiece of cybernetic capital fifty years later It also includes a political economic study of the scale scope and dynamics of the contemporary AI industry as well as a labour process analysis of commercial machine learning software production based on interviews with workers and management in AI companies around the world ranging from tiny startups to giant technology firms On the basis of this study Steinhoff develops a Marxist analysis to argue that the popular theory of immaterial labour which holds that information technologies increase the autonomy of workers from capital tending towards a post capitalist economy does not adequately describe the situation of high tech digital labour today In the AI industry digital labour remains firmly under the control of capital Steinhoff argues that theories discerning therein an emergent autonomy of labour are in fact witnessing labour s increasing automation
