Metaverse Datafication Chris Hesselbein, Paolo Bory, Stefano Canali, 2026-05-04

This book explores the most pressing questions and concerns that are emerging in tandem with the development of metaverse platforms and technologies. It focuses on the central question of how the gallop towards bigger and richer data will extend and intensify current drives towards datafication and commodification. The volume draws on different disciplines in the social sciences and humanities including science and technology studies, critical data studies, communication and media studies and cultural studies as well as philosophy and political science to offer a range of complementary perspectives. The essays combine conceptual reflection on as well as empirical engagement with the topic of metaverse datafication and its political, infrastructural and social implications. Key focal points include analysis of the corporate narratives that drive the current development of metaverse platforms and technologies, the computational infrastructures and material resources that enable metaverse technologies, the reconfiguration or even subversion of state power, global markets and regulatory frameworks, the impact of metaverse practices and data on social life and personal identity and the role that these developments play for academic research and our conceptualisation of knowledge. This book was originally published as a special issue of Information Communication Society.
