## Amoeba Sisters Video Recap: Microscopes

1. Explain why both magnification and resolution are important in order to see a microscopic organism.

Magnification can make

us see the image of microscopic organisms in larger appearance and resolution can make us distinguish between two microscopic organisms. If the image is too blurry, it is better for us to distinguish them and see bigger for better observation.

Getting a high resolution. Family photo centered with a bit of zoom.

2. How are electron microscopes different from light microscopes and how is their ability to observe a specimen different?

Electron microscopes use electron beams to see images while light microscopes use light to see an image. Electron microscopes can see to see viruses that is a lot smaller than bacteria which a light microscope can see.

3. What are two different types of electron microscopes and how might their ability to observe a specimen be different?

The two different types of electron microscopes are Transmission Electron Microscope (TEM) and Scanning Electron Microscope (SEM). TEM is to observe within or the internal structure of the specimen while SEM is to observe the 3D surface of the specimen.

4. Label the below objective lenses.

For the following tip, explain the reasoning for why it should be followed.

It's important to be aware that many slides and coverslips are made of glass.

5. Reasoning: Glass objects are the slides and coverslips we use in microscopes are delicate and gentle which can break and crush. It's important for us to be aware that what it is made of.
