grade 2 0 University of M nster Englisches Seminar course Systemic Functional Linguistics language English abstract

Wherever we look we see language constituting the world not just reflecting it For instance the words for colours make a reality they don t just name things which are there the spectrum isn t divided into seven primary colours all the colours merge into one another According to structural linguistics by using language we are not reflecting a given reality but are rather construing one Systemic functional grammar developed by M A K Halliday states just this construal feature of language as well That language functions to make meanings and not to only refer to the outside world But furthermore elaborates on how a text makes those meanings It focuses therefore on the functional description of language The basic assumption is that language use is always functional people do not just talk or just write 2 but rather any use of language serves a specific purpose namely to make meanings The primary concern of systemic functional linguistics can therefore be summed up under the questions How is language structured for use 3 How does it make meanings According to Halliday language makes meanings on three different levels simultaneously on the experiential level because it represents experience on the interpersonal level because language is used to interact with each other and on the textual level because we organize our message somehow This research paper will focus on the textual metafunction of language which is the theory of the clause being organized as a message The aim is to show that text itself construes the context by involving meaningful choices concerning what to put in thematic position and by means of cohesion Thus context is not only created through coherence i e the outside knowl

Invitation to Systemic Functional Linguistics Through the Cardiff Grammar Robin Fawcett, 2008-07

This short book is two books in one First it is a genuinely introductory introduction to the main concepts of Systemic Functional Grammar SFG for the 21st century Drawing on recent research it focuses on the structure of the clause in English bringing out clearly i the multifunctional nature of language and ii the way in which structures are the result of choices between meanings It is an extension of Halliday s SFG in several ways including the introduction of new elements that are of growing importance in the language and a simplification of it in that it shows how the many strands of meaning in a clause can be expressed in a single structure But this is also a book for experienced linguists who may include the teachers of the first group who are interested in a scholarly work which i compares the two main current versions of Systemic Functional Grammar with respect to the structure of the English clause and ii gives reasons for every decision to prefer one analysis to another This book within a book is achieved through a generous use of extended footnotes The Cardiff Grammar version of SFG is based as firmly in the core principles of SFG principles as the Sydney Grammar the version in Halliday s Introduction to Functional Grammar Halliday however describes the development in the Sydney Grammar since the 1970s as expansions into new areas beyond what he has aptly termed the lexicogrammar In contrast the Cardiff Grammar s description of English lexicogrammar and other languages has made significant advances since the 1970s under the influence of eight major factors Versions of this book are being published concurrently in Chinese by Peking University Press and Spanish University of Plata

del Mar Press      *Systemic Functional Grammar & Natural Language Generation* Elke Teich,1999-05-11 This volume deals with the computational application of systemic functional grammar SFG for natural language generation In particular it describes the implementation of a fragment of the grammar of German in the computational framework of KOMET PENMAN for multilingual generation The text also presents a specification of explicit well formedness constraints on syntagmatic structure which are defined in the form of typed feature structures It thus achieves a model of systemic functional grammar that unites both the strengths of systemics such as stratification functional diversification and the orientation to context and the kind of syntactic generalizations that are typically found in modern syntagmatically focused computational grammars
