Romijn,Graeme P. Smith,Jaco C. van de Pol,2005-10-27 This book constitutes the refereed proceedings of the 5th International Conference on Integrated Formal Methods IFM 2005 held in Eindhoven The Netherlands in November December 2005 The 19 revised full papers presented together with 3 invited papers were carefully reviewed and selected from 40 submissions The papers are organized in topical sections on components state event based verification system development applications of B tool support non software domains semantics as well as UML and statecharts Practical SSADM Version 4 Philip L. Woodcock,Peter G. Larsen,1993 The last few years have borne witness to a remarkable diversity of formal methods with applications to sequential and concurrent software to real time and reactive systems and to hardware design In that time many theoretical problems have been tackled and solved and many continue to be worked upon Yet it is by the suitability of their industrial application and the extent of their usage that formal methods will ultimately be judged This volume presents the proceedings of the first international symposium of Formal Methods Europe FME 93 The symposium focuses on the application of industrial strength formal methods Authors address the difficulties of scaling their techniques up to industrial sized problems and their suitability in the workplace and discuss

Lee McCluskey, 1994 Introducing two widely used approaches to the formal specification of software systems this book considers VDM and the algebraic approach In each case the emphasis is intuitive rather than mathematical and shows the reader how to construct a formal specification from the first principles by using general procedures that can be followed each time Familiar applications are referred to throughout and examples small case studies and problems accompany each chapter The two approaches are brought together in one large joint case study at the end of the book as well as a section comparing and contrasting them
