Generalized Extreme Value Distribution with Time-dependence Using the AR and MA Models in State Space Form Jouchi Nakajima, 2009 A new state space approach is proposed to model the time dependence in an extreme value process The generalized extreme value distribution is extended to incorporate the time dependence using a state space representation where the state variables either follow an autoregressive AR process or a moving average MA process with innovations arising from a Gumbel distribution Using a Bayesian approach an efficient algorithm is proposed to implement Markov chain Monte Carlo method where we exploit a very accurate approximation of the Gumbel distribution by a ten component mixture of normal distributions The methodology is illustrated using extreme returns of daily stock data The model is fitted to a monthly series of minimum returns and the empirical results support strong evidence for time dependence among the observed minimum returns Authors abstract
