Qualitative Spatio-Temporal Representation and Reasoning: Trends and Future Directions Hazarika, Shyamanta M.,2012-05-31 Space and time are inextricably linked Reasoning about space often involves reasoning about change in spatial configurations Qualitative spatial information theory encompasses spatial as well as temporal representation and reasoning Qualitative Spatio Temporal Representation and Reasoning Trends and Future Directions is a contribution to the emerging discipline of qualitative spatial information theory within artificial intelligence This collection of research covers both theory and application centric research and provides a comprehensive perspective on the emerging area of qualitative spatio temporal representation and reasoning This revolutionary new field is increasingly becoming a core issue within mobile computing GIS spatial information systems databases computer vision as well as knowledge discovery and data mining *Design Computing and Cognition '18* John S. Gero,2019-01-07 This is the proceedings of the Eighth International Conference on Design Computing and Cognition DCC 18 held at the Politecnico di Milano in Italy This volume presents both advances in theory and applications and demonstrates the depth and breadth of design computing and design cognition Design thinking the label given to the acts of designing has become a paradigmatic view that has transcended the discipline of design and is now widely used in business and elsewhere As a consequence there is an increasing interest in design research This volume contains papers that represent the state of the art research and developments in design computing and design cognition This book is of particular interest to researchers developers and users of advanced computation in design and those who need to gain a better understanding of designing that can be obtained through empirical studies **Memoirs of the Institute of Scientific and Industrial Research, Osaka University** Ōsaka Daigaku. approaching the architectural side of a cultural mutation that has been affecting the Western experimental areas of knowledge and practice since the end of the last century A transformative process constituted by a constellation of transdisciplinary manifestations accelerations turns shortcuts and clusterizations that by no means can be read under one single epistemological umbrella In this sense rather than approaching the practice of architecture focusing on its disciplinary inner specificity this book approaches the research of experimental architecture focusing on its extra disciplinary entanglements It argues that a vast multiplicity of fields of knowledge participates in a cultural endeavour modulated through three protocols forms of action that singularize three decades Conformative Protocols 1990 2000 Distributive Protocols 2000 2010 and Expansive Protocols 2010 2020 These three periods shouldn't be read as three hermetic and concatenated monades but as three different modulations of the same narrative that is as three overlapping and coexisting systems whose peaks of intensity occur in three different decades However the main purpose of this book is not limited to unveiling the ethos of these three conjugations It also aims at using this framework as a time field a narrative map that moves from the classificatory to the cartographical in order to vectorize the last 30 years of experimental architecture In this sense this book argues that this threefold set of protocols represents the progressive attempt to constitute critical interiorities looking for and produced through interactions that are increasingly more intimate and whose agents are increasingly more diverse A tendency oriented towards the consolidation of an intimacy between strangers that highly resonates with the cultural and technological landscape in which experimental architecture operates

Universal Ontology of Geographic Space: Semantic Enrichment for Spatial Data Podobnikar, Tomaž, Čeh, Marjan, 2012-03-31 A universal approach to the ontology of geographic space has already been and is going to be a comprehensive task for establishing more effective spatial models The concept of a universal spatial ontology should be independent of location culture and time It should be fundamental and universal in the same way that the number p defines the ratio between the diameter and the circumference of a circle The term universal therefore means all embracing and for general propose Universal Ontology of Geographic Space Semantic Enrichment for Spatial Data aims to escalate the current scope of research to support the development of semantically interoperable systems of geographic space This reference will aid university lecturers and professors students researchers developers of spatial applications *Principles of Knowledge Representation and Reasoning* Luigia Carlucci Aiello, Jon Doyle, Stuart Charles Shapiro, 1996 *Akten des Siebenten Internationalen Kant-Kongresses*, 1991

Adopting the Track of Expression: An Emotional Symphony within **An Ontological Framework For Representing Topological**

In a world used by screens and the ceaseless chatter of instantaneous transmission, the melodic elegance and emotional symphony created by the written term usually fade into the backdrop, eclipsed by the relentless sound and interruptions that permeate our lives. Nevertheless, situated within the pages of **An Ontological Framework For Representing Topological** a charming fictional prize filled with natural thoughts, lies an immersive symphony waiting to be embraced. Crafted by a wonderful musician of language, that interesting masterpiece conducts visitors on a psychological journey, well unraveling the hidden melodies and profound influence resonating within each cautiously constructed phrase. Within the depths of this emotional assessment, we can explore the book's central harmonies, analyze its enthralling publishing style, and submit ourselves to the profound resonance that echoes in the depths of readers' souls.
