Name _____

SK18 - The student will be able to draw and explain how a catalyst changes a reaction rate graph and discuss other changes that disrupt an equilibrium system.

1. Using the reaction diagram to the right, representing the reaction: $A + B \rightarrow C + D$ draw a new curve that shows how a catalyst would affect the reaction pathway.

2. Place a checkmark next to the actions that would most likely increase the reaction rate.

- Lowering the temp of the system
- Increasing the concentration of substances present
- Grinding a solid in to fine particles
- Removing a enzyme catalyst

3. Explain why all reactions have activation energy, using your knowledge of collision model.

4. Explain why different reactions have different activation energies.

5. Describe how the activation energy of a reaction affects the overall rate of the chemical reaction differently than a change in concentration, pressure, or temp.

6. A rule of thumb used by most chemists is that the rate of a chemical reaction can be doubled by increasing the reaction temperature by ten degrees Celsius. Explain this drastic increase in reaction rate using your knowledge of the collision model.

SK19 - The student will be able to write the equilibrium expression, given a reaction.

When a reaction reaches equilibrium the reverse reaction forms reactants at the same rate that the forward reaction produces products. A reaction may appear to stop when it reaches equilibrium because the amount of products and reactants does not change. This process is called dynamic equilibrium.

A reaction that has reached equilibrium can be described with a ratio known as the equilibrium expression. This expression relates the concentration of products divided by the concentration of reactants, solving for the equilibrium constant, K_c . When writing equilibrium expressions, only aqueous and gaseous substances are included.

Balance the following equations & write the equilibrium expressions needed to solve for K_c :

When the principles of Sequence Stratigraphy were first published 20 years ago it was not immediately clear that this concept would revolutionise the way we look at deposition and architecture of sedimentary rocks Perhaps in retrospect it should not have been so surprising For the first time seismic data were clear enough that large scale depositional geometries could be resolved geometries that were not evident from well data alone and in outcrop work visible only in the largest cliff sections The observations from seismic data made by the Exxon workers in the 1960 s and 1970 s were a crucial piece of the jigsaw in our knowledge of the way sediments are deposited and formed the basis for the new paradigm of Sequence Stratigraphy Gradually through the 1980 s the tool of Sequence Stratigraphy was applied to a wide variety of subsurface problems most commonly large scale regional reviews of 2D seismic data Geologists and geophysicists in the oil industry began to realise that here was a way of thinking about rocks that could be used in a true predictive sense The paradigm implied that one systems tract should follow another in a predictable way that observations in one part of a basin had implications in another part and that undetected play systems could be inferred and targeted with exploration programs Sequence Stratigraphy has now gone through a second phase of evolution The initial concepts have been applied to well and core data Methodologies have evolved for identifying systems tracts from trends in logs and depositional facies and from often subtle observations in core The resolving power of 3D seismic data has increased considerably and we can now see

depositional bodies on a relatively small scale and map their internal character using attribute analysis Sequence Stratigraphy has entered its High Resolution phase *INIS Atomindex* ,1980 **Environment Abstracts Annual** ,1991 This database encompasses all aspects of the impact of people and technology on the environment and the effectiveness of remedial policies and technologies featuring more than 950 journals published in the U S and abroad The database also covers conference papers and proceedings special reports from international agencies non governmental organizations universities associations and private corporations Other materials selectively indexed include significant monographs government studies and newsletters *British Humanities Index* ,1988
