 The Cost of Noise Reduction for Departure and Arrival Operations of Commercial Tilt Rotor Aircraft Henry B.

Faulkner,1976 The relationship between direct operating cost DOC and noise annoyance due to a departure and an arrival operation was developed for commercial tilt rotor aircraft This was accomplished by generating a series of tilt rotor aircraft designs to meet various noise goals at minimum DOC These vehicles ranged across the spectrum of possible noise levels from completely unconstrained to the quietest vehicles that could be designed within the study ground rules Optimization parameters were varied to find the minimum DOC This basic variation was then extended to different aircraft sizes and technology time frames It was concluded that reducing noise annoyance by designing for lower rotor tip speeds is a very promising avenue for future research and development It appears that the cost of halving the annoyance compared to an unconstrained design is insignificant and the cost of halving the annoyance again is small *Health, 2001-2002* Richard Yarian,2001-02 This compilation of public press articles examines how Americans make choices about controlling their health the impact of stress and emotions on mental health the effects on diet and nutrition on well being influences of exercise and diet on health how drugs affect our lives recent research on human reproduction and sexuality the major causes of death in the Western world the current state of health care in today s society food labelling and food and drug interactions hazards that affect our health and are encountered in today s world This title is supported by Dushkin Online www.dushkin.com online our student Web site
