Algorithms and Data Structures Charles F. Bowman, 1994 With numerous practical real world algorithms presented in the C programming language Bowman's *Algorithms and Data Structures: An Approach in C* is the algorithms text for courses that take a modern approach For the one or two semester undergraduate course in data structures it instructs students on the science of developing and analyzing algorithms Bowman focuses on both the theoretical and practical aspects of algorithm development He discusses problem solving techniques and introduces the concepts of data abstraction and algorithm efficiency More importantly the text does not present algorithms in a shopping list format Rather it provides actual insight into the design process itself **Algebra and Trigonometry** John W. Coburn, 2010 Three components contribute to a theme sustained throughout the Coburn Series that of laying a firm foundation building a solid framework and providing strong connections Not only does Coburn present a sound problem solving process to teach students to recognize a problem organize a procedure and formulate a solution the text encourages students to see beyond procedures in an effort to gain a greater understanding of the big ideas behind mathematical concepts **Systems in Organizations** M.
