Python was designed in the early 1980s. Initially Python did not make its mark in the industry as intended due to the absence of adequate marketing. It also had some inbuilt problems relating to the key idea which worked as an obstacle in its successful route. With renovation by Google within the twentieth century improvements were seen in Python as some needed modifications were made in its set up and settings. As a consequence it has acquired authority and efficiency within itself. Google altered the language's key logic and also removed all of the library's repeated modules and techniques to make it smoother and lighter. Its efficiency has now improved more than three times than before. Therefore it becomes one of the industry's most powerful languages gaining tremendous popularity among developers and tech experts over the past decade turning out to be a gem in the IT industry. Today many programming languages exist. Some are being used and some are now deemed outdated. The programming situation has altered dramatically over the past few years as designers and programmers are looking for more universal and accessible languages and this is why the language of Python has lately become so popular.
