China has developed into the leading market for e-mobility and for the use of autonomous robotaxis, AI, and data. Established manufacturers have to change much more quickly based on clear objectives in order not to lose touch and to still be able to achieve the Paris climate goals. The industry is changing comprehensively from a vehicle-focused to a mobility-oriented business model. More and more processes, even entire business areas, will run automatically based on AI, and new technologies will change sales and aftersales structures. More and more data is being created, which also enables new profitable products. The switch to e-vehicles with an appropriate charging environment, the use of mobility services instead of car ownership, climate-neutral production, and the circular economy must be addressed more quickly. The third edition of the book provides complete information on the digital transformations that are still absolutely necessary and taking into account the latest developments. Revised edition, comprehensive and pragmatic answers to current questions: How should new technologies be used in a structured manner, and where will AI lead to significant changes? How should the transformation be approached, and with what key topics? The outlook beyond 2040 at the end of the book has been expanded, and the expected changes in the world of work are considered, especially from an AI perspective.
