## Reading Comprehension

**Decoding Life: Protein Synthesis**

**Directions:** Read the passage and answer the questions that follow. Write your answers in the space provided.

**Protein Synthesis**

Protein synthesis is the process by which cells build proteins. It is a fundamental biological process that occurs in all living organisms. The process involves the translation of genetic information from DNA into a functional protein.

**Transcription**

Transcription is the first step in protein synthesis. It occurs in the nucleus of eukaryotic cells and in the cytoplasm of prokaryotic cells. During transcription, a segment of DNA is copied into a messenger RNA (mRNA) molecule. The mRNA molecule then carries the genetic information to the ribosome, where protein synthesis takes place.

**Translation**

Translation is the second step in protein synthesis. It occurs at the ribosome, where the mRNA molecule is used as a template to assemble a polypeptide chain. The polypeptide chain is then folded into a specific three-dimensional shape, which determines the protein's function.

**Protein Structure**

Proteins are made up of long chains of amino acids. The sequence of amino acids in a protein determines its structure and function. Proteins can be classified into primary, secondary, tertiary, and quaternary structures. The primary structure is the linear sequence of amino acids. The secondary structure is the local folding of the polypeptide chain into alpha-helices and beta-sheets. The tertiary structure is the overall three-dimensional shape of the protein. The quaternary structure is the assembly of multiple polypeptide chains into a functional protein complex.

**Protein Function**

Proteins perform a wide variety of functions in the cell. Some proteins act as enzymes, catalyzing chemical reactions. Other proteins act as structural components, providing support and shape to the cell. Some proteins act as signaling molecules, transmitting information from one cell to another. Proteins also play a role in the immune system, defense against pathogens, and the regulation of gene expression.
