**Star of the Seven Seas** Catherine Fet, Leonid Trostanetsky, 2021-09 In elementary school math word problems were the bane of my existence I could crunch numbers with ease but word problems were tricky because of the logical sorting you have to do to arrive at an equation Establishing what s known and what s unknown and the relationship between

them was not easy for me Some word problems tell a story where events are out of order You have to re order them first to grasp what was there at the start what changes and what is missing Some word problems use tricks like A crocodile is 7 feet long and that s 3 times shorter than a snake How long is the snake In 3rd grade that word shorter tricked me into division instead of multiplication every single time This reasoning that turns a word problem into an equation was always the hardest part for me not the calculations but the logical part As a grownup looking back I could hardly understand why I was so lost around word problems But then seeing my 7 year old son currently in 3rd grade lose track now and then while trying to solve them I realized that it would be helpful for him to start from the very beginning from the simplest 1st grade word problems and strengthen his grasp of the logic What are we looking for For the whole or for the missing part How to find the missing part if you know the whole and so on This book is a guided tour of the major types of elementary school curriculum word problems from a b to multiplication and division covering material typically taught in Grades 1 through 3 By genre it s not fun math Rather it s an entertaining and colorful tutoring aid for kids aimed at brushing up their understanding of how to solve word problems The reading level of the book is about 2nd grade independent reading or reading with the parent simple vocabulary short paragraphs lots and lots of pictures I divide word problems into houses Problems of the same type live together We visit each house and first solve a couple word problems together step by step I explain what is special about each word problem type and warn of any potential tricks Then I offer 2 or 3 word problems to be solved by the reader The answers are at the back of the book To add a bit of challenge humor and excitement every few pages I invite the reader to the House of Tricks inhabited by trick word problems I also offer a few puzzles logical brain teasers and finally we explore why some numbers such as 3 or 7 or 9 were believed to be magical in the ancient world One other thing that bothers me about math word problems is how boring and unimaginative their stories are It s always some kids selling T shirts buying apples swimming so many laps or baking cupcakes To break out of this mundane environment I replaced all these boring characters with vampires fairies princesses dragons mummies serpents and occasional historical characters from Cleopatra and Constantine the Great to Queen Elizabeth I Oh one more thing White paper with endless rows of numbers depresses me Just don t tell my Dad who has co authored this book with me He is a mathematician and his idea of a great time is solving higher math equations for fun after dinner He is OK if a math book looks like the Arctic landscape with a sprinkling of numbers but I want color pictures and humor So there you have it The Star of the Seven Seas      The Psychology of Problem Solving Janet E. Davidson, Robert J. Sternberg, 2003-06-09 Problems are a central part of human life The Psychology of Problem Solving organizes in one volume much of what psychologists know about problem solving and the factors that contribute to its success or failure There are chapters by leading experts in this field including Miriam Bassok Randall Engle Anders Ericsson Arthur Graesser Keith Stanovich Norbert Schwarz and Barry Zimmerman among others The Psychology of Problem Solving is divided into four parts Following an introduction that reviews the nature of problems and the history and

methods of the field Part II focuses on individual differences in and the influence of the abilities and skills that humans bring to problem situations Part III examines motivational and emotional states and cognitive strategies that influence problem solving performance while Part IV summarizes and integrates the various views of problem solving proposed in the preceding chapters
