Catalog University of Colorado Boulder,2005 *Random Processes with Applications to Circuits and Communications* Bernard C. Levy,2019-09-14 This textbook is based on 20 years of teaching a graduate level course in random processes to a constituency extending beyond signal processing communications control and networking and including in particular circuits RF and optics graduate students In order to accommodate today s circuits students needs to understand noise modeling while covering classical material on Brownian motion Poisson processes and power spectral densities the author has inserted discussions of thermal noise shot noise quantization noise and oscillator phase noise At the same time techniques used to analyze modulated communications and radar signals such as the baseband representation of bandpass random signals or the computation of power spectral densities of a wide variety of modulated signals are presented This book also emphasizes modeling skills primarily through the inclusion of long problems at the end of each chapter where starting from a description of the operation of a system a model is constructed and then analyzed Provides semester length coverage of random processes applicable to the analysis of electrical and computer engineering systems Designed to be accessible to students with varying backgrounds in undergraduate mathematics and engineering Includes solved examples throughout the discussion as well as extensive problem sets at the end of every chapter Develops and reinforces student s modeling skills with inclusion of modeling problems in every chapter Solutions for instructors included **Universities Handbook** ,2014
