Design of Image Processing Embedded Systems Using Multidimensional Data Flow Joachim Keinert, Jürgen Teich, 2010-11-18 This book presents a new set of embedded system design techniques called multidimensional data flow which combine the various benefits offered by existing methodologies such as block based system design high level simulation system analysis and polyhedral optimization It describes a novel architecture for efficient and flexible high speed communication in hardware that can be used both in manual and automatic system design and that offers various design alternatives balancing achievable throughput with required hardware size This book demonstrates multidimensional data flow by showing its potential for modeling analysis and synthesis of complex image processing applications These applications are presented in terms of their fundamental properties and resulting design constraints Coverage includes a discussion of how far the latter can be met better by multidimensional data flow than alternative approaches Based on these results the book explains the principles of fine grained system level analysis and high speed communication synthesis Additionally an extensive review of related techniques is given in order to show their relation to multidimensional data flow

A Cascade Optimization Strategy for Solution of Difficult Multidisciplinary Design Problems, 1996 A research project to comparatively evaluate 10 nonlinear optimization algorithms was recently completed A conclusion was that no single optimizer could successfully solve all 40 problems in the test bed even though most optimizers successfully solved at least one third of the problems We realized that improved search directions and step lengths available in the 10 optimizers compared were not likely to alleviate the convergence difficulties For the solution of those difficult problems we have devised

an alternative approach called cascade optimization strategy The cascade strategy uses several optimizers one followed by another in a specified sequence to solve a problem A pseudorandom scheme perturbs design variables between the optimizers The cascade strategy has been tested successfully in the design of supersonic and subsonic aircraft configurations and air breathing engines for high speed civil transport applications These problems could not be successfully solved by an individual optimizer The cascade optimization strategy however generated feasible optimum solutions for both aircraft and engine problems This paper presents the cascade strategy and solutions to a number of these problems *Proceedings of the ...
