depth overview of an emerging field that brings together high performance computing big data processing and deep
Learning Over the last decade the exponential explosion of data known as big data has changed the way we understand and
harness the power of data The emerging field of high performance big data computing which brings together high
performance computing HPC big data processing and deep learning aims to meet the challenges posed by large scale data
processing This book offers an in depth overview of high performance big data computing and the associated technical issues
approaches and solutions The book covers basic concepts and necessary background knowledge including data processing
frameworks storage systems and hardware capabilities offers a detailed discussion of technical issues in accelerating big
data computing in terms of computation communication memory and storage codesign workload characterization and
benchmarking and system deployment and management and surveys benchmarks and workloads for evaluating big data
middleware systems It presents a detailed discussion of big data computing systems and applications with high performance
networking computing and storage technologies including state of the art designs for data processing and storage systems
Finally the book considers some advanced research topics in high performance big data computing including designing high
performance deep learning over big data DLoBD stacks and HPC cloud technologies Machine Learning Infrastructure

DescriptionAlthough creating a machine learning pipeline or developing a working prototype of a software system from that
pipeline is easy and straightforward nowadays the journey toward a professional software system is still extensive This book
will help you get to grips with various best practices and recipes that will help software engineers transform prototype
pipelines into complete software products The book begins by introducing the main concepts of professional software
systems that leverage machine learning at their core As you progress you ll explore the differences between traditional non

ML software and machine learning software The initial best practices will guide you in determining the type of software you need for your product Subsequently you will delve into algorithms covering their selection development and testing before exploring the intricacies of the infrastructure for machine learning systems by defining best practices for identifying the right data source and ensuring its quality Towards the end you ll address the most challenging aspect of large scale machine learning systems ethics By exploring and defining best practices for assessing ethical risks and strategies for mitigation you will conclude the book where it all began large scale machine learning software What you will learn Identify what the machine learning software best suits your needs Work with scalable machine learning pipelines Scale up pipelines from prototypes to fully fledged software Choose suitable data sources and processing methods for your product Differentiate raw data from complex processing noting their advantages Track and mitigate important ethical risks in machine learning software Work with testing and validation for machine learning systems Who this book is for If you re a machine learning engineer this book will help you design more robust software and understand which scaling up challenges you need to address and why Software engineers will benefit from best practices that will make your products robust reliable and innovative Decision makers will also find lots of useful information in this book including guidance on what to look for in a well designed machine learning software product
