achieving higher crop productivity but major crops have reached a plateau in their yield potential Therefore the current focus  
for sustainable intensification of agriculture is the use of biotechnological approaches to enhance the yield potential by  
combating the yield losses that occur due to abiotic stresses The abiotic stresses are governed by multigenes and therefore a  
holistic approach is needed to get success in imparting stress tolerance to enhance the yield potential of our crops Plants  
face multiple stress conditions during their life stages and adopt several physiological biochemical and molecular strategies  
to combat that which are sometimes not sufficient to survive particularly crop plants The climate change era has created a  
need to understand the abiotic stresses in a holistic way Therefore a deep understanding of multiple abiotic stress  
mechanisms is necessary to develop crops tolerant to climate fluctuation With this background the outline of this book covers  
the following features Agriculture sustainability and molecular understanding of multiple stress tolerance Systems biology
