## Context

When purchasing items, it is often not possible to take advantage of more than one retailer's offer on the same item. In this activity, you will compare the discounts offered by two different retailers. You will use retail prices, the difference between the reference price and the actual price to assess the savings. Furthermore, when one retailer has an additional percentage off the already discounted price, you will determine how good that offer is, relative to the other retailer's percentage off the original price. The savings percentage is determined by which offer is considered by the retailer.

**Reference Price** = \$100, **Reference Price** = \$100

**Offer 1** = 10% off the Reference Price = \$10 off = \$90

**Additional Percentage** = 10% off the Reference Price = \$10 off = \$90

**Final Price** = \$90 + \$10 off = \$80

**Final Price** = \$90 + \$10 off = \$80
