## Science Comprehension Passage

### WiFi

WiFi is like the invisible wings that lets your devices connect to the internet without any wires! Imagine you have a secret tunnel that takes you to all your favorite websites. That's what WiFi does, but it's all done using special radio waves instead of wires!

So, do you? WiFi is a wireless technology that allows devices like smartphones, tablets, and computers to connect to the internet and communicate with each other without using cables. It's like having a digital highway that carries data from your devices to the internet and back again.

One of the coolest things about WiFi is how convenient it is. Instead of being tied down by cables, you can now move around freely while still staying connected to the internet. Whether you're browsing on the go, watching a new favorite TV show, or keeping up on a hobby, WiFi has you completely covered.

But have you ever noticed WiFi actually works? It's all thanks to special devices called routers, which send out waves that your devices can receive. When you connect to a WiFi network, your device sends signals to the router, which then forwards them to the internet and vice versa. It's like having a messenger that carries your messages back and forth between your device and the internet.

One important thing to know about WiFi is that it has a limited range. Typically, it works best within 100 feet or less. This means that you have to be within range of the router to connect to the internet. But don't worry – if you want a larger range, the connection automatically disconnects so you don't have to worry about accidentally using up all your data.

WiFi technology has come a long way since it was first invented, with newer versions offering faster speeds, longer ranges, and better performance. Today, WiFi is found in a wide range of devices, from smartphones and laptops to smart home appliances and gaming consoles.

In conclusion, WiFi is a wireless technology that allows devices to connect to the internet and communicate with each other without using cables. It's convenient, versatile, and essential for staying connected in our digital world.
