

In Chapter 1, we defined economic actors as economic agents, or people or organizations engaged in one or the other economic activities: production, distribution, exchange, consumption, and resource allocation. Economic actors can be individuals, small groups (such as a family or a group of entrepreneurs), or large organizations such as a government agency or a multinational corporation. Economists in effect have their activity defined and approved as they engage in economic activities. In this chapter we explore the behavior of individual economic actors—people. We look at contemporary research on their beliefs, and, where appropriate, compare this with older approaches.

1. Economic Unrationalities or Human Irrationalities

Economists have long believed that all people and all acts are rationally calculated to please our wants and wishes, our well-being. I believe, all economic behavior is human behavior. Sometimes economists disagree about the nature of human behavior, the validity of rationality, or the degree to which it prevails, but all economists agree that the boundaries of rationality are determined by human decisions or behavior. The economic humanistically view, on a working point, make list of irrational about the economic behavior economic actors.

1.1 Classical Economic View of Human Nature

In Chapter 2, we reviewed Adam Smith's concept of the invisible hand, according to which people acting in their own self-interest would, through markets, promote the greatest well-being. The concept of the invisible hand has become very famous, and it is often taken out of context to mean that if people only behave with self-interest, they will do what is best for the world economy.

This interpretation would have surprised Smith, who, before writing his famous *Wealth of Nations* and *The Theory of Moral Sentiments*, he wrote the manuscript with more than people and institutions. His emphasis then is on the desire of people to have self-interest and the degree of selfish. He stresses that such things depend on people acting honestly, justly, and with concern and sympathy for others in their community. Smith recognizes that selfish desires play a large role but believes that they will be held in check both by the "moral sentiments" (the virtuous desire that will respect and the respect of others) and also by the "external restraints by which the many (and) few will be united with one" (provide the public interest).

Thus Smith's version of human nature and human institutions was one in which individual self-interest was mixed with many social instincts. Rather than starting with *Wealth of Nations*, which David Hume (as we noted, he perceived that the behavior of any one person always had to be understood in light of the person's social context).

Papers in Theoretical Economics: Rationality, games, and strategic behaviour Kaushik Basu, 2005 This volume is a collection of the author's interdisciplinary essays straddling several of the social sciences and also the philosophical foundations of economics. Most essays have a development slant and several make explicit reference to India.

Bounded Rationality and Economic Evolution Clement Allan Tisdell, 1996 This seminal work advances beyond neoclassical economics to provide an integrated overview of the implications for economic decision making and the management of bounded rationality and its evolutionary consequences. Professor Tisdell successfully combines recent developments in learning and game theory, transaction costs and evolutionary economics to provide new insights into economic and managerial phenomena. The results are applied to different levels of decision making including decisions by individuals taking into account learning possibilities, decisions by groups and economic organizations including optimal communication within organizations. *Bounded Rationality and Economic Evolution* will be of particular use to economists, academics in management, business administration and public administration and social scientists interested in group behaviour.

Risk, Uncertainty and Rational Action Carlo C. Jaeger, Thomas Webller, Eugene A. Rosa, Ortwin Renn, 2013-11-05 Risk as we now know it is a wholly new phenomenon, the by-product of our ever more complex and powerful technologies. In business policy making and in everyday life it demands a new way of looking at technological and environmental uncertainty. In this definitive volume four of the world's leading risk researchers present a fundamental critique of the prevailing approaches to understanding and managing risk, the rational actor paradigm. They show how risk studies must incorporate the competing interests, values and rationalities of those involved and find a balance of trust and acceptable risk. Their work points to a comprehensive and significant new theory of risk and uncertainty and of the decision making process they require. The implications for social, political and environmental theory and practice are enormous. Winner of the 2000-2002 Outstanding Publication Award of the Section on Environment and Technology of the American Sociological Association.

Expectations, Rationality and Economic Performance Tobias F. Rötheli, 2007 This book offers a broad perspective on the economics of expectations. Experimental studies are used to analyse how human bounded rationality affects economic performance. The challenges posed for policy making are also addressed. Tobias Rötheli begins by presenting the basic tools and theoretical models necessary to our understanding of rational and boundedly rational expectations and their role in economic life. Key topics discussed include expectations in general equilibrium theory, probabilities and expected utility, heterogeneity of economic agents, behavioural alternatives to forecasting and the effects of expectations heuristics, particularly in financial markets. The author then goes on to explore the fascinating insights behavioural economics, the empirical analysis of economic decision making has to offer. Here experimental studies illustrate the effects of costly information, the role of pattern recognition as a basis of expectations, anticipation and coordination failures and the role of expectations in determining the general price level. The book also addresses the implications of the experimental findings for applied economics. Aiming to achieve the

accessibility of a textbook this research monograph will appeal to economic researchers interested in economic behaviour and theory as well as students taking upper level undergraduate and graduate courses It will also be of interest to economists working in business and government

Rationality in Economics: Alternative Perspectives Kenneth G. Dennis, 1998-04-30 Ideas linked to rational choice theory started to appear frequently in the economics literature in the 1960s and 1970s but the attention given to rationality widened to include commentators presenting far reaching appraisals and critiques The literature grew to a steady flow and spanned diverse areas of thought including socialist and rational choice Marxist assessments and other approaches including institutional sociological psychological ethical choice theoretical strategic and game theoretical treatments of rationality This diversity of literature led to the creation of this volume The essays in this volume illustrate diversity and despite the variety of approaches there remains a common core of meaning that accommodates not so much a radically different set of concepts of rationality as a highly variegated array of methods and approaches to this subject Contributors address topics of their choice on the concept of rationality in economics and the selection of these contributors is meant to represent a variety of backgrounds and approaches

The Legacy of Herbert Simon in Economic Analysis Peter E. Earl, 2001 Herbert A Simon has been a leading contributor to cognitive psychology computer science public administration philosophy and statistics and is the winner of the 1978 Nobel Memorial Prize in economics As this authoritative collection demonstrates his impact on economics has been felt in areas as diverse as the theory of the firm and economic organization consumer behaviour law and economics and environmental economics Central to his work is the notion of bounded rationality the mismatch between human decision making capacities and the scale of the decision problems that people face which results in satisficing rather than optimising behaviour and his belief that economic research should start from the study of actual behaviour rather than being based on convenient but unrealistic assumptions Peter Earl s choice of articles shows both the kind of economics that emerges when Simon s philosophy is followed comprehensively and what happens when neo classical economists partially adopt his ideas
