Alleluia Don Swenson, 2018-09-15 The Alleluia Community is a unique Christian community of over three hundred committed charismatic Christians in Augusta Georgia who live a covenant and ecumenical lifestyle Emerging from the Charismatic Renewal Movement of the 1960s members of Alleluia have maintained a lively charismatic dimension of the

Christian tradition with a willingness to make a life time covenant commitment to each other Since 1973 this group of people has exhibited heroic virtue self sacrifice humility deference for one another and service to others outside their boundaries They claim to be guided by the Holy Spirit in their daily lives Their leaders lead with a strong sense of service and Christian love and a willingness to lay down their own agendas A major feature of these covenant makers is that they strive for daily Christian unity while being committed to one of the twelve plus various denominations and fellowships Swenson had the opportunity of living among these people for twenty months During this time he used a mixed method approach involving over one hundred interviews and three hundred instruments to create both qualitative and quantitative measures of the lives of these people To structure their story he used the dilemmas of the institutionalization of religion from the scholarship of Thomas O Dea and secularization theory The data gathered give abundant evidence that these Alleluia faithful have substantively resisted the secular influence so common in Western culture [Social Science Data Analysis](#) Florian G. Hartmann, Johannes Kopp, Daniel Lois, 2023-05-05 In this book basic statistical knowledge is conveyed in an understandable and application oriented manner The readers should be enabled to carry out their own empirical evaluations and to understand or critically reflect on existing analyses The third edition is extended by a detailed chapter on the logic of significance tests A replication syntax for the statistical program Stata is provided online as supplementary material

Sovereignism and Populism Linda Basile, Oscar Mazzoleni, 2021-12-19 At a time when populism and appeal for national and popular sovereignty are on the rise in Europe the USA and beyond this volume proposes a new research agenda in political science that focuses on the linkages between populist and sovereignism in Europe The book s core question is to know and describe whether how and to what extent populism has been able to articulate the calls for taking back control of the national borders and authority by looking at both the demand and supply sides Through compelling empirical analyses the authors offer fresh data and theoretical insights on the determinants of the support for sovereigntist claims and its impact on voting choices as well as on the features of the sovereignist discourse in populist parties Coupled with the growing electoral success of party based populism sovereignism actually poses challenges to the ongoing processes of supranational integration This urges a timely rethinking of democratic politics and calls for far sighted alternatives to taking back control to address the impact of globalisation and regionalisation on contemporary societies The chapters in this book were originally published as a special issue of the journal *European Politics and Society* [Applied Statistics for the Social and Health Sciences](#) Rachel A. Gordon, 2012-07-26 *Applied Statistics for the Social and Health Sciences* provides graduate students in the social and health sciences with the basic skills that they need to estimate interpret present and publish statistical models using contemporary standards The book targets the social and health science branches such as human development public health sociology psychology education and social work in which students bring a wide range of mathematical skills and have a wide range of methodological affinities For these students a successful course in statistics will not only offer statistical

content but will also help them develop an appreciation for how statistical techniques might answer some of the research questions of interest to them This book is for use in a two semester graduate course sequence covering basic univariate and bivariate statistics and regression models for nominal and ordinal outcomes in addition to covering ordinary least squares regression Key features of the book include interweaving the teaching of statistical concepts with examples developed for the course from publicly available social science data or drawn from the literature thorough integration of teaching statistical theory with teaching data processing and analysis teaching of both SAS and Stata side by side and use of chapter exercises in which students practice programming and interpretation on the same data set and course exercises in which students can choose their own research questions and data set This book is for a two semester course For a one semester course see <http://www.routledge.com/9780415991544> A Gentle Introduction to Stata, Second Edition Alan C.
