According to scientists today, how fast do changes on Earth happen?

What are two things that paleontologists can learn from fossils?

What is a fossil? How is a trace fossil different from a body fossil?

One kind of fossil forms from the body parts of organisms. What is another kind of fossil?

Imagine that you find a layer of rock containing many fossil clams. The layer of rock is 50 km from the ocean. The fossils are about 5 million years old. Clams usually live in shallow ocean water. Based on the fossils, what can you guess about the environment in this area 5 million years ago? Explain your answer.

What is relative dating?

Imagine that you are a geologist and you find an unconformity between two rock layers. What can you guess about the environment at the time the unconformity was forming?

Give two ways that an unconformity can form.

What is a disconformity?

Give two ways in which geologists use the geologic column.

How can geologists learn the exact age of a rock?

Using relative dating, a scientist learns that a rock is about 50,000 years old. Can the scientist use the potassium-argon method to find the exact age of this rock?
