Hands-On Large Language Models Jay Alammar,Maarten Grootendorst,2024-09-11 AI has acquired startling new language capabilities in just the past few years Driven by the rapid advances in deep learning language AI systems are able to write and understand text better than ever before This trend enables the rise of new features products and entire industries With this book Python developers will learn the practical tools

and concepts they need to use these capabilities today You ll learn how to use the power of pre trained large language models for use cases like copywriting and summarization create semantic search systems that go beyond keyword matching build systems that classify and cluster text to enable scalable understanding of large amounts of text documents and use existing libraries and pre trained models for text classification search and clusterings This book also shows you how to Build advanced LLM pipelines to cluster text documents and explore the topics they belong to Build semantic search engines that go beyond keyword search with methods like dense retrieval and rerankers Learn various use cases where these models can provide value Understand the architecture of underlying Transformer models like BERT and GPT Get a deeper understanding of how LLMs are trained Understanding how different methods of fine tuning optimize LLMs for specific applications generative model fine tuning contrastive fine tuning in context learning etc

Generative AI with Kubernetes Jonathan Baier,2025-02-28 DESCRIPTION Over the past few years we have seen leaps and strides in ML and most recently generative AI Companies and software teams are rushing to enhance rebuild and create new software offerings with this new intelligence As they innovate and create delightful new experiences for their customers new challenges arise Understanding how these applications work and how to use state of the art infrastructure tools like Kubernetes will help organizations and professionals succeed with this new technology The book covers essential technical implementations from ML fundamentals through advanced deployment strategies focusing on practical patterns Core topics include Kubernetes native GPU scheduling and resource management MLOps pipeline architectures using KubeFlow MLflow and advanced model serving patterns It details data management architectures vector databases and RAG systems alongside monitoring solutions with Prometheus Grafana Finally we will look at some advanced concerns for production in the realm of security and data reliability After reading this book you will be equipped with a broad knowledge of the end to end generative AI pipeline and how Kubernetes can be leveraged to run your generative AI workloads at scale in the real world KEY FEATURES Learn how Kubernetes can help you run your generative AI workloads Using hands on examples you will work with real world foundational models and a variety of tools and capabilities in the K8s ecosystem A broad survey of both generative AI and Kubernetes in one book WHAT YOU WILL LEARN How to evaluate and compare models for new applications and use cases How Kubernetes can add reliability and scale to your AI applications What does an AI delivery pipeline contain and how to start one How AI models encode words and work with natural language How prompting and refinement techniques can improve results How to use your own data to augment AI responses WHO THIS BOOK IS FOR This book is for teams building new applications or new functionality with generative AI but want to better understand the infrastructure needed to bring their AI applications to production This book is also for shared services infrastructure or cybersecurity teams who provide platforms and infrastructure for application or product development TABLE OF CONTENTS 1 Introduction to Generative Artificial Intelligence 2 Kubernetes for Generative AI 3 Introduction to Foundational Models on Kubernetes 4 Working with

Architectural Analysis and Performance Characterization of NVIDIA GPUs Using Microbenchmarking

Saktheesh Subramoniapillai Ajeetha,2012 Abstract Emergence of new Graphical Processors for general purpose computing presents new challenges for application developers Graphical Processors vary in terms of number of processor cores per chip processor speed and memory subsystems NVIDIA s CUDA provides a C like abstraction layer for software developers to implement their applications on GPUs often with little knowledge of the underlying hardware and they are forced to work with high level descriptions documented by the manufacturer Substantial knowledge of the hardware architecture will be useful for harvesting the full potential of GPU architectures while trying to solve complex parallel programming problems

This work reports the measurements and characterization of performance of several NVIDIA GPU s using micro benchmark analysis Our thesis uses and adapts the CUDA Micro benchmarks 8 and SHOC benchmarks 9 to characterize the important aspects of NVIDIA s GTX200 series GPU architecture machine GTX280 and Fermi series architecture machines GTX580 Tesla C2050 The investigation is conducted by performing a micro architectural analysis of these machines and comparing their basic performance parameters This thesis presents an experiment based methodology for characterizing the properties of the arithmetic pipelines We also measure the global and shared memory latency and bandwidth of these machines and validate the hardware characteristics presented in CUDA programming guide We hope that the insights from this work will be useful for improving the analysis and performance optimization of CUDA programs
