Redesigning Thinking Clive Grinyer, 2025-06-16 The world doesn't work. But there is a way to make it work. It's called design. In *Redesigning Thinking*, Clive Grinyer discusses service design, the holistic process of managing all the points in a customer's journey with the provider from the initial introduction down to the last customer interaction with the purpose of designing each interaction and experience in a way that is user-friendly and relevant to the customer. He argues that design is a way to think more humanely to create better business and navigate through complex systems to achieve successful outcomes. Sharing inspirational stories and examples of the power of design from around the world, he explores how service design methods combine data and research to understand how context and creativity can be used as a problem-solving tool to engineer, reframe, and deliver effective solutions and help organizations succeed. Whether you are a leader in business or in government, a practicing designer looking to use your skills to enhance your impact, or a student keen to use your creativity to improve the prospects of the planet and society, this book will challenge you to change how you think. It will help you make informed decisions and craft products and services designed to create solutions for the people who use them.

Google Maps Hacks Rich Gibson, Schuyler Erle, 2006-01-17 Want to find every pizza place within a 15-mile radius? Where the dog parks are in a new town? The most central meeting place for your class, club, or group of friends? The cheapest gas stations on a day-to-day basis? The location of convicted sex offenders in an area to which you may be considering moving? The applications, serendipitous and serious, seem to be infinite as developers find ever more creative ways to add to and customize the satellite images and underlying API of Google Maps. Written by Schuyler Erle and Rich Gibson, authors of the popular *Mapping Hacks*, *Google Maps Hacks* shares dozens of tricks for combining the capabilities of Google Maps with your own datasets. Such diverse information as apartment listings, crime reporting, or flight routes can be integrated with Google's satellite imagery in creative ways to yield new and useful applications. The authors begin with a complete introduction to the standard features of Google Maps. The adventure continues with 60 useful and interesting mapping projects that demonstrate ways developers have added their own features to the maps. After that's given you ideas of your own, you learn to apply the techniques and tools to add your own data to customize and manipulate Google Maps. Even Google seems to be tacitly blessing what might be seen as unauthorized use, but maybe they just know a good thing when they see one. With the tricks and techniques you'll learn from *Google Maps Hacks*, you'll be able to adapt Google's satellite map feature to create interactive maps for personal and commercial applications for businesses ranging from real estate to package delivery to home services, transportation, and more. Includes a foreword by Google Maps tech leads Jens and Lars Rasmussen.
