Mastering Composition In Digital Photography:

Mastering Composition R. Williams, 2014 Going beyond the rule of thirds this offers invaluable tips and tools to help the photographer take control of the creative process with emphasis on four elements an impactful subject dynamic composition effective use of lighting and an ability to invoke an emotional response in the viewer What makes a great photo Flicking through the pages of popular photography magazines you might get the impression that there s only one rule of importance the rule of thirds Indeed it appears that some will judge the merit of a photograph based almost solely on this Rarely do you hear discussion about visual weight balance negative space depth and so on Author and professional photographer Richard Garvey Williams argues that success lies in a combination of four elements an impactful subject dynamic composition effective use of lighting and perhaps the most crucial ability to invoke an emotional response in the viewer Citing examples gleaned from a study of history the Ancient Greeks Golden Ru Fibonacci s mathematical ratio and the principles known as the Gestalt theory the author analyzes the concepts rules and guidelines that define successful composition in photography and offers practical guidance to achieving great results In clear concise and jargon free text he also considers the role of tone and color in good composition and offers invaluable tips and the tools to help the photographer take control of the creative process The book is illustrated with examples of the author s own beautiful nature photography along with diagrams and notation to explain techniques most clearly A final chapter in this definitive guide for all serious photographers discusses photography and its relationship to art before offering a considered conclusion to the exploration of this fascinating topic

Mastering Photographic Composition, Creativity, and Personal Style Alain Briot, 2010-12-14 Alain Briot states that The personality of the photographer must be present in the image for an artistic photograph to have value And in this book he sets out to teach the things that are essential in achieving this goal Following his successful first book Mastering Landscape Photography Briot goes beyond the conventional rules of composition and takes on a fresh new approach to teaching the art of photography Based upon his personal experiences as an artist teacher and photographer he opens new doors to the reader doors leading to new ways of seeing and composing images Briot approaches fine art photography as being a combination of art and technique In this new book he addresses both of these by presenting artistic and technical information On the artistic side Briot introduces artistic concepts that have been rarely if ever associated with photography On the technical side he presents numerous tools that can help you learn how to create better photographs and provides technical solutions to common photographic problems The author practices photography as a fine art What matters most to him is how photography can be used to express feelings and emotions For Briot a good photograph must be both artistically inspired and technically excellent To have just one of these two elements is not enough for a fine art photograph to be successful Topics include How to compose with color with black and white and with light Why you need to consider your audience while composing a photograph Recreate the emotions you felt when you captured your photographs How the elements of color hue contrast and saturation work in your images How to control the elements that have a visual effect in your photographs How to draw upon your personal way of seeing and then share your vision How to diagnose image maladies and apply the proper remedies How to define a color palette for a specific photograph How to use compositional elements to develop a personal style Forword by Tony Sweet [Digital](#)

Moving around gives you access to different perspectives which might actually bring better compositions than what you first assumed

Horizon lines Different from leading lines horizon lines break up the frame into two parts

Shape You will learn how to utilize shape that already exists in the frame and how to create it where you want it using points of interest

Foreground and background This tip also mentions usage of mid ground and why you should take advantage of the entire depth of your frame not just the immediate foreground

Weight You can give weight to your photos by placing a heavier subject to one side or the top or bottom of a frame

Juxtaposition Juxtaposition has to do with both the composition of your photo as well as the content of your photo It basically means that you will place two opposite things side by side This could be anything from darkness and light complementary colors or things that have differing symbolic meaning

Balance Balance ironically you may think is achieved in odd numbers

Tension Tension also often has a lot to do with the content of a photo as well You can create tension by examining the relationships of your subjects and composing them accordingly

Framing Framing is so very important in composition It can dramatically alter a viewer's perception of a scene Also especially with people it's important not to cut part of your subject out of the frame

Color Finally there is color which can often be used as a crutch by new photographers However with this tip you will learn how to properly control it and use it to your advantage for maximum visual and emotional effect While it may seem overwhelming at first combining all of these elements will soon become a snap once you learn to recognize them As your awareness grows so will your ability to utilize them and even artfully and successfully break rules as well
