A toilet can keep running for a number of reasons, including:

- **Flapper:** A worn-out or damaged flapper can't seal properly, allowing water to leak from the tank into the bowl. Flappers are inexpensive and easy to replace.
- **Chain:** A broken or improperly-sized chain between the flush lever and the flapper can prevent the flapper from rising and letting water into the bowl.
- **Float:** A float that's too high can cause overflow water to leak into the bowl.
