Physio-logging in Humans: Recent Advances and Limitations in Wearable Devices for Biomedical Applications

Mohammad Yavarimanesh, Colin K. Drummond, Cederick Landry, 2025-08-29 The recent advancements in wearables nearables and machine learning have paved the way for unparalleled approaches to monitoring physiological parameters. These approaches show great potential in studying human physiology during daily life as well as in extreme conditions such as astronaut monitoring and human performance. In addition, wearables and recent advances in physio logging can alleviate the impact of numerous diseases and medical conditions globally and therefore have the potential to reduce the cost of healthcare and increase patients quality of life. Noteworthy strides have already been accomplished evoking enthusiasm among patients and researchers alike but very few wearable solutions have reached their anticipated potential due to many limitations such as sensor interoperability, fit, comfort, adverse reaction to wearables, lack of design standards and validation guidelines. By curating an article collection that brings together explored avenues to monitor physiological parameters that did or did not work, it is anticipated that further progress in the field can be accelerated.

The techniques used to produce artefacts, physical objects, infrastructures, programs, algorithms, software, and data. Big data, linked data, metadata, ontologies are the subject of many innovations as the field of IoT is rich and stimulating. Along with this technological boom, IoT uses to colonize new fields of application in the fields of transport, administration, housing, maintenance, health, sports, well-being. Privileged interface with digital ecosystems now at the heart of social exchanges, the IoT develops a power to act whose consequences, both good and bad, make it difficult to assess a fair business.
