## Smart Home 2025:

**Home Digital Twins** Tuan Anh Nguyen, 2026-02-20 Home Digital Twins explores how digital twin technologies can serve as a bridge between the real home and the virtual home. It explains how IoT devices, wearable sensors, artificial intelligence (AI), and machine learning (ML) can aid in the diagnosis, prediction, and prevention of abnormal, critical, and extreme problems in real home environments while also showing how digital twin computing can support the management of home energy consumption to optimize everyday living. The book also considers the security and ethical implications of introducing digital twin technology in the home to ensure the technology benefits the lives of the home's inhabitants. The introduction of sensor networks into the home environment allows automation into the home utilizing internet of things (IoT) devices to program, for example, door opening, room luminosity, room temperature, and humidity. Digital Twin technology extends the capabilities of the smart home, collecting and analyzing data from the Activities of Daily Living (ADLs) and applying Human Activity Recognition (HAR) algorithms to provide adaptive services, including minimizing power consumption, improving healthcare, and enhancing overall well-being. However, there are many challenges when applying these algorithms to the smart home due to the variability and sparsity of sensor data, which can lead to a mismatch between the real home and the digital home. Explains how digital twins gather real home data to create a virtual model of the home. Considers the associated technologies that support home digital twins, including Internet of things, artificial intelligence, machine learning, and blockchain. Explores how digital twins can be used in the home to monitor and improve our daily lives. *Bedford's Tech Edge*, 2003. The influence of IoT on CRM. Conditions and possibilities in B2C markets Robin Hafer, 2020-03-12. The digitalisation pictures the most incisively change in human lives after the industrialisation. It enables the rapid transfer of complex information content necessary for the conduct of business and private transactions. Especially the interconnectivity between objectives, the Internet of Things (IoT) has a massive impact on how people use digital products. It determines the direction of communication between companies and their potential customers. What is the status quo of IoT? How can it be used in Customer Relationship Management (CRM)? The author of the book at hand offers answers to those questions and explains how IoT can be used properly by companies to unfold its potential. He shows how the combination of IoT and CRM can lead to a bright future for the B2C market.
