

IBM Strengthens Focus on Professional Project Management

Center of Excellence Celebrates More Than Two Decades of Service

By Jim Boland, Leader, and Orla Stefanazzi, Communications Lead,
IBM Project Management Global Centre of Excellence, IBM Global Business Services

IBM has made an ongoing commitment to project management excellence. The journey began in the early to mid-nineties when we transformed our culture and support systems to improve business posture. The company took bold steps in how to organize, execute and track work. We also began to group work into projects that produced services, products and solutions for our customers. This approach was applied to both external and internal development projects.

IBM's Project Management Center of Excellence:

- Helps the organization become a project-based enterprise that applies and integrates project management disciplines into all core business processes and systems;
- Drives consistent and broad use of project management disciplines, including the formalization of the position of project manager throughout organization

On February 5, 1997, the IBM Project Management Center of Excellence (PMCOE) was born with a charter to drive IBM's transition to and support of professional project management worldwide, a competency deemed necessary to ensure effectiveness and success within a matrix enterprise.

Since its inception, the IBM PMCOE—working hand in hand with all business units worldwide—ensured that we became a project-based enterprise that applies and integrates project management disciplines into all core business processes and systems.

The initial charter drove more consistent and broader use of project management disciplines, including the formalization of the position of project manager throughout our organization.

Over time, the IBM PMCOE has driven the transformation and integration of project management into the fabric of the organization. Our professionals are more experienced and capable in their abilities to get their work done using project management disciplines.

Strategic Lean Thinking and Value Management for Gravel Roads in Zambia Richard Kasongo, 2015-11-25 Doctoral Thesis Dissertation from the year 2015 in the subject Engineering General course Civil Engineering Management Construction Project Management language English abstract This research topic is entitled Strategic Lean Thinking and Value Management for Gravel Roads The study captured 82 respondents as research sample to a case study of Output Performance Based Contracts OPRCs for the Construction and Maintenance of Gravel Roads in Zambia Purposive sampling was used as most research participants were drawn from second generation OPRCs that were active between 2009 and 2014 The study was aimed at devising new Construction and Maintenance Contract methods for gravel roads that are based on Lean Thinking and Value Management philosophies in Zambia The established epistemological background to the study is that most of the Zambian road network is of gravel or earth standards and is therefore imperative that they are well maintained to attain desired service levels to properly serve the intended beneficiaries the road users The Road Development Agency Annual Report of 2009 indicated that 33 000 Km of the total 40 671 Km core road network is classified as gravel roads unpaved which are at the moment mostly in a deteriorated state The study revealed that currently in Zambia Gravel Road Construction projects are commonly being realised through the use of traditional Contracts such as admeasured by the use of Bills of Quantities BOQs the Lump sum and Cost plus etc These are mainly short term form of Contracts which to some extent lack some components of sustainable maintenance regimes thereby rendering the Government and other Promoters efforts futile as gravel roads sooner or later deteriorate just after the first rain season upon their construction This was theoretical perspective which served as driver to the Research problem The study noted that current forms of Contracts did not inspire and spur the spirit of ownership as the local people were left out in the planning and design stages of gravel road projects Despite all the attempts made by Government through the RDA and other implementing Agencies the Road Construction Industry in general has failed to get the best value for money through the use of these conventional types of Contracts One of the reasons for this failure according to Womack and Jones 2003 is that it is hard to define and realise value this is partly because most Producers Road Contractors want to make what they are already making and partly because Customers only know some variant of what they are already getting
