CASE

MM, a 76-year-old white female, weight 50 kg, height 5'2." She has no known drug allergies.

Chief Complaint/History: MM was recently found to have Alzheimer disease. Before the diagnosis, her family noted that she was constantly misplacing familiar items, such as her keys and eyeglasses. She also seemed to be having difficulty remembering regular appointments and medications. She also often speaks of certain long-deceased relatives as being still alive and sometimes calls her son by her brother's name. Around the house, she often leaves the stove on after cooking. She regularly seems to get disoriented. She seems more irritable and anxious, even around familiar friends. Her family is concerned about her ability to remain living at home independently and recently started looking at group homes focusing on care of patients with early-stage Alzheimer disease. This has been difficult because MM gets angry during any conversations regarding leaving her home.
