Ordinary Differential Equations for Engineers Ali Ümit Keskin, 2018-09-01 This monograph presents teaching material in the field of differential equations while addressing applications and topics in electrical and biomedical engineering primarily. The book contains problems with varying levels of difficulty including Matlab simulations. The target audience comprises advanced undergraduate and graduate students as well as lecturers but the book may also be beneficial for practicing engineers alike.

Continuous-Time Signals and Systems Oktay Alkin, 2025-03-24 Drawing on author's 30 years of teaching experience *Continuous Time Signals and Systems A MATLAB Integrated Approach* represents a novel and comprehensive approach to understanding signals and systems theory. Many textbooks use MATLAB as a computational tool but Alkin's text employs MATLAB both computationally and pedagogically to provide interactive visual reinforcement of fundamental concepts important in the study of continuous time signals and systems. In addition to 210 traditional end of chapter problems and 168 solved examples the book includes hands on MATLAB modules consisting of 77 MATLAB based homework problems and projects coordinated with the traditional end of chapter problems 106 live scripts and GUI based interactive apps that animate key figures and bring core concepts to life. Downloadable MATLAB code for most of the solved examples 64 fully detailed MATLAB exercises that involve step by step development of code to simulate the relevant signal and or system being discussed including some case studies on topics such as synthesizers simulating instrument sounds pulse width modulation etc. The ebook version includes clickable links that allow running MATLAB code associated with solved examples and exercises in a browser using the online version of MATLAB. It also includes audio files for some of the examples. Each module or application is linked to a specific segment of the text to ensure seamless integration between learning and doing. The aim is to not simply give the student just another toolbox of MATLAB functions but to use the development of MATLAB code as part of the learning process or as a litmus test of students understanding of the key concepts. All relevant MATLAB code is freely available from the publisher. In addition a solutions manual figures presentation slides and other ancillary materials are available for instructors with qualifying course adoption.

Modeling with Differential Equations in Chemical Engineering Stanley M. Walas,1991 Modelling with Differential Equations in Chemical Engineering covers the modelling of rate processes of engineering in terms of differential equations While it includes the purely mathematical aspects of the solution of differential equations the main emphasis is on the derivation and solution of major equations of engineering and applied science Methods of solving differential equations by analytical and numerical means are presented in detail with many solved examples and problems for solution by the reader Emphasis is placed on numerical and computer methods of solution A key chapter in the book is devoted to the principles of mathematical modelling These principles are applied to the equations in important engineering areas The major disciplines covered are thermodynamics diffusion and mass transfer heat transfer fluid dynamics chemical reactions and automatic control These topics are of particular value to chemical engineers but also are of interest to mechanical civil and environmental engineers as well as applied scientists The material is also suitable for undergraduate and beginning graduate students as well as for review by practising engineers
