Highway Engineering Martin Rogers, 2003-06-23 Rogers Highway Engineering This book provides an introduction to highway engineering for students on degree and diploma courses in civil engineering It moves in a logical sequence from the planning and economic justification for a highway through the geometric design and traffic analysis of highway links and

intersections to the design and maintenance of both flexible and rigid pavements Existing texts have tended to concentrate purely on highway planning and analysis or on pavement design and maintenance aspects of highway engineering As a result the standard has tended to be too advanced for students studying the subject for the first time This textbook covers the basic ground in both areas It features worked examples and case studies as an aid to understanding individual topics and aims to provide the student with a solid practically based foundation for the topic of highway engineering thus providing a gateway to the more advanced and specialised texts The author Martin Rogers BE MEngSc PhD BA Public Ad CEng MICE MRTPI Chartered Engineer and Chartered Town Planner received his professional education at University College Dublin and the Institute of Public Administration Dublin He has worked in private practice and as a senior local authority engineer and was a member of the Dublin Transport Initiative Study Team that devised the current transportation plan for the Dublin city region He joined the permanent staff at the Dublin Institute of Technology in 1993 and is currently a Senior Lecturer in the Department of Civil and Structural Engineering He has previously co written one postgraduate and one undergraduate text on project appraisal methods and has published technical papers in a number of internationally recognised engineering construction planning and operational research journals Also of interest Engineering Project Appraisal Martin Rogers 0 632 05606 1 Cover illustration courtesy of FaberMaunsell Ltd Cover design by Garth Stewart
