How to Lose Weight with Volumetrics (Setting Up a Volumetric Eating Plan) Serge

Uri,2012-03-12 ABOUT THE BOOK People who want to lose weight are frequently overwhelmed by the large number of diets exercise routines nutritional supplements or certain equipment that are available on the market and online Additionally one may feel that counting calories or reading nutritional value labels on food packages is an endless task and decreases their motivation to succeed Barbara Rolls an accomplished nutrition professor at Penn State University recognized the need for a well structured comprehensive and easy to understand approach to weight loss and healthy nutrition She designed a great weight loss diet called Volumetrics that eliminates the need to count calories which lowers stress levels enhances a one s self confidence and provides several nutritional principles that may be applied immediately These principles do not require extensive preparation or reading EXCERPT FROM THE BOOK The reason why energy density and food volume are important when it comes to weight loss is because of our digestive system physiology and the regulation of appetite The brain centers which are responsible for appetite and food intake receive continuous feedback from certain nervous receptors located in the stomach walls These nerve endings do not effectively react to food composition but they do respond to food volume This means that stomach receptors do not distinguish between a certain volume of potatoes or the same volume of cheese Obviously cheese contains more fat and thus more calories However your brain has no way of knowing the energetic density of cheese it receives data only about its volume When we eat and food reaches our stomach the nerve receptors are stimulated by the stretch of stomach walls which depends on pressure created by food volume The stomach is abundant in nerves which send nervous signals to brain centers that regulate appetite and food intake When pressure created by food volume reaches a certain threshold the brain sends inhibitory signals that decrease the appetite and reduce the food intake This translates into a sensation of satiety and disappearance of hunger Dr Rolls believes that increasing the consumption of foods with very low and low energy density allows a person to limit the amount of calories and lose weight without the need to monitor calories and perform various calculations The author illustrates the relationship between dietary energy density and energy intake in a 2009 research study conducted at the Department of Nutritional Sciences Pennsylvania State University This makes the Volumetrics diet easy to apply into daily nutrition by putting the advice into practice quickly and effectively Buy a copy to keep reading CHAPTER OUTLINE How to Lose Weight with Volumetrics Introduction Why Is Weight Management Important What is Energy Density of Foods How Does The Volumetrics Diet Work and much more

Cheatham, Leo R. Cheatham, 1993-03-24 The new manufacturing environment requires new cost accounting systems as well as new technology While some authorities have advocated installing new and untried systems the authors of this book recommend updating the standard cost system which 85 percent of manufacturing firms have in place Updating the present system can achieve greater benefits in terms of providing information to managers for decision making It also allows the organization to avoid disruption to the corporate culture and the cost associated with a new system The authors show how standard cost systems can be redesigned to measure factors recognized to be important in today s manufacturing environment such as quality production levels and throughput They demonstrate how standard cost systems can foster continuous improvement through dynamic rather than static standards After examining characteristics of the new manufacturing environment and benefits of upgrading the cost system ways to update the traditional standard cost system are discussed Revisions include a unique input output method of variance analysis specific metrics related to manufacturing performance ways to identify cost drivers and use of dynamic standards The authors demonstrate how to redesign the

information gathering and reporting system as new manufacturing procedures are put in place They discuss ways that marketing activities are affected and how to plan plant and equipment expenditures in an automated environment This book is directed primarily towards accountants and managers needing to improve informational content of accounting data for decision making purposes It should also be beneficial to any person within the business firm who either supplies data of this type or uses it such as project analysts controllers managers and even management trainees Academicians teaching cost and managerial accounting as well as those teaching production management and financial decision making courses should find it beneficial as a text supplement or as a primary text in courses dealing with current problems in today s changing manufacturing environment
