LISP(1)                 UNIX Programmer's Manual                 LISP(1)

NAME
    lisp - lisp interpreter

SYNOPSIS
    lisp

DESCRIPTION
    Lisp is a lisp interpreter for a dialect which closely
    resembles MIT's MACLISP.  This lisp, known as FRANZ LISP,
    features an I/O facility which allows the user to change the
    input and output syntax, add macro characters, and maintain
    compatibility with upper-case only lisp systems; infinite
    precision integer arithmetic, and an error facility which
    allows the user to trap system errors in many different
    ways.  Interpreted functions may be mixed with code compiled
    by liszt(1) and both may be debugged using the ``Joseph Lis-
    ter'' trace package.  A lisp containing compiled and inter-
    preted code may be dumped into a file for later use.
