Three Theories of the Solar System

Compare and contrast the three theories of the formation of the solar system.

In the geocentric theory, the Earth is at the center of the solar system. The Sun, Moon, and planets revolve around the Earth. This theory was widely accepted for many centuries.

During the 16th century, Copernicus proposed the heliocentric theory, which states that the Sun is at the center of the solar system and the planets revolve around it. This theory was initially met with resistance but eventually gained acceptance.

In the 18th century, Laplace proposed the nebular theory, which suggests that the solar system formed from a rotating cloud of gas and dust. As the cloud collapsed, it flattened into a disk, and the Sun formed at the center.

The nebular theory is supported by evidence from space exploration and observations of other star-forming regions. It explains the composition and structure of the solar system.
