Microstructure-Property Optimization in Metallic Glasses Baran Sarac, 2015-03-12 This thesis consists of an in depth study of investigating microstructure property relationships in bulk metallic glasses using a novel quantitative approach by which influence of the second phase features on mechanical properties can be independently and systematically analyzed The author evaluates and optimizes the elastic and plastic deformation as well as the overall toughness of cellular honeycombs under in plane compression and porous heterostructures under uniaxial tension The study reveals three major deformation zones in cellular metallic glass structures where deformation changes from collective buckling showing non linear elasticity to localized failure exhibiting a brittle like deformation and finally to global sudden failure with negligible plasticity as the length to thickness ratio of the ligaments increases The author found that spacing and size of the pores the pore configuration within the matrix and the overall width of the sample determines the extent of deformation where the optimized values are attained for pore diameter to spacing ratio of one with AB type pore stacking

Practical Guide to ICP-MS and Other Atomic Spectroscopy Techniques Robert Thomas, 2023-09-29 Written by one of the very first practitioners of ICP MS Practical Guide to ICP MS and Other Atomic Spectroscopy Techniques A Tutorial for Beginners presents ICP MS in a completely novel and refreshing way By comparing it with other complementary atomic spectroscopy AS techniques it gives the trace element analysis user community a glimpse into why the technique was first developed and how the application landscape has defined its use today 40 years after it was first commercialized in 1983 What's new in the 4th edition Updated chapters on the fundamental principles and applications of ICP MS New chapters on complementary AS techniques including AA AF ICP OES MIP AES XRF XRD LIBS LALI TOFMS Strategies for reducing errors and contamination with plasma spectrochemical techniques Comparison of collision and reaction cells including triple multi quad systems Novel approaches to sample digestion Alternative sample introduction accessories Comprehensive glossary of terms used in AS New vendor contact information The book is not only suited to novices and beginners but also to more experienced analytical scientists who want to know more about recent ICP MS developments and where the technique might be heading in the

future Furthermore it offers much needed guidance on how best to evaluate commercial AS instrumentation and what might be the best technique based on your lab s specific application demands I feel honored to have been asked to deliver the Foreword for this book which is suited not only for beginners but also for more experienced analytical scientists who want to know the advances in plasma spectrochemistry instrumentation and related future opportunities Dr Heidi Goenaga Infante LGC Science Fellow Chief Scientist National Measurement Laboratory Visiting Professor University of Strathclyde UK

Characterization of Nanocomposites Frank Abdi,Mohit Garg,2017-03-31 These days advanced multiscale hybrid materials are being produced in the industry studied by universities and used in several applications Unlike for macromaterials it is difficult to obtain the physical mechanical electrical and thermal properties of nanomaterials because of the scale Designers however must have knowledge of these properties to perform any finite element analysis or durability and damage tolerance analysis This is the book that brings this knowledge within easy reach What makes the book unique is the fact that its approach that combines multiscale multiphysics and statistical analysis with multiscale progressive failure analysis The combination gives a very powerful tool for minimizing tests improving accuracy and understanding the effect of the statistical nature of materials in addition to the mechanics of advanced multiscale materials all the way to failure The book focuses on obtaining valid mechanical properties of nanocomposite materials by accurate prediction and observed physical tests as well as by evaluation of test anomalies of advanced multiscale nanocomposites containing nanoparticles of different shapes such as chopped fiber spherical and platelet in polymeric ceramic and metallic materials The prediction capability covers delamination fracture toughness impact resistance conductivity and fire resistance of nanocomposites The methodology employs a high fidelity procedure backed with comparison of predictions with test data for various types of static fatigue dynamic and crack growth problems Using the proposed approach a good correlation between the simulation and experimental data is established
