Review of Maritime Transport 2023 United Nations Conference on Trade and Development (UNCTAD),2023-09-28 The Review of Maritime Transport is an UNCTAD flagship publication published annually since 1968 Around 80 per cent of the volume of international trade in goods is carried by sea and the percentage is even higher for most developing countries The Review of Maritime Transport provides an analysis of structural and cyclical changes affecting seaborne trade ports and shipping as well as an extensive collection of statistical information The report calls for a just and equitable transition to a decarbonized shipping industry The sector whose greenhouse gas emissions have risen 20% over the last decade operates an ageing fleet that runs almost exclusively on fossil fuels As global leaders prepare for the next UN climate conference COP28 UNCTAD advocates for system wide collaboration swift regulatory intervention and stronger investments in green technologies and fleets Full decarbonization by 2050 will require massive investments and could lead to higher maritime logistics costs raising concerns for vulnerable shipping reliant nations like small island developing states The report emphasizes the need to balance environmental goals with economic needs but underscores that the cost of inaction far outweighs the required investments The report recommends policy actions to overcome supply chain hurdles African countries face including poor logistics low levels of technology fragmented markets limited capital sources and weak institutions and regulations Beyond cleaner fuels the industry needs to move faster towards digital solutions like AI and blockchain to improve efficiency as well as sustainability In its analysis of global maritime trends the report highlights shipping s resilience despite major challenges stemming from global crises such as the war in Ukraine Maritime trade is expected to grow 2.4% in 2023 and more than 3% between 2024 and 2028

Review of Maritime Transport 2024 United Nations Trade and Development (UNCTAD),2024-10-22 Global

maritime trade grew by 2.4% in 2023 recovering from a 2022 contraction but the recovery remains fragile. Key chokepoints like the Suez and Panama Canals are increasingly vulnerable to geopolitical tensions, conflicts, and climate change. These disruptions are extending shipping routes, straining supply chains, and raising costs with profound impacts on food security, energy supplies, and the global economy as over 80% of world trade volume is carried by sea. Vulnerable economies, especially small island developing States and least developed countries, are hit hardest by rising shipping costs from rerouted vessels. The Review of Maritime Transport 2024 highlights these challenges, calling for urgent action to strengthen industry resilience, accelerate decarbonization, and support vulnerable economies. It underscores the need for new infrastructure that is sustainable and resilient, a faster transition to low carbon shipping, and a crackdown on fraudulent ship registrations to safeguard global trade.
