Design Thinking with Artificial Intelligence Daniel Graff, Mark A. Clark, Dan Li, Lei Xia, 2026-03-11 This book is a timely and valuable guide for innovators, designers, managers, and students who want to boost their design thinking projects through leveraging artificial intelligence capabilities. It offers over 40 traditional design thinking tools enhanced with AI. Each AID tool is ready for use with specific step-by-step instructions that require little previous AI knowledge. So if you would like to use AI to create a Critical Items Diagram, deploy Explorative AI to AI Interviews, build a Customer Journey Map, engage in Rapid Prototyping, or Create a Pitch, there is a tool to support your project. The book highlights how AI can support and enhance each phase of the design thinking process, prepare it, augment it, Drawing on real-world experiments, they reveal how the future of creative work lies in a dynamic dialogue between human intuition and computational power. This book is a manifesto for the next great leap in innovation: a practical framework for unlocking human-AI collaboration and building a future where imagination and computation work hand in hand. Anna Phan, UX Lead, Monetization, Google. Most people think of design as a way to make things look better. This book asks a deeper question: what happens when design itself starts to think? In *Design Thinking with Artificial Intelligence*, Graff and his team show how AI doesn't replace creativity; it reorganizes it. Their experiments with students, businesses, and algorithms reveal something quietly revolutionary: the future of innovation isn't man or machine, but the conversation between them. It's a manual for the next creative leap when intuition meets computation and imagination learns to collaborate. Ling Fan, Founder, Tezign, Founder, d mix Lab. This comprehensive, thoughtful book masterfully lays out the foundations of Design Thinking and the immense potential of integrating AI to accelerate and improve any design process. Packed with practical, how-to examples, the authors demonstrate how to seamlessly weave AI into your existing workflow, equipping you with powerful new tools and techniques for every step of the design process. Most importantly, the book proves how AI can augment—not replace—human innovation and creativity, providing the knowledge to effectively upskill talented designers. By putting design and human

There is rapid development and change in the field of computer science today These affect all areas of life Emerging topics in computer science are covered in this book In the first chapter a specific IoT application called a smart mailbox with face recognition which uses cellular connectivity and image processing to securely deliver valuable documents The prototype for this system includes a fingerprint reader camera electromagnetic lock and various other components connected to an Arduino Uno and a Raspberry Pi and uses OpenCV and Python software for face detection and recognition In the second chapter authors compares and evaluates the main characteristics of 5G channels and the performance of two channel coding candidates low density parity check LDPC codes and polar codes The analysis considers block error rate bit error rate computational complexity and flexibility and finds that polar codes outperform LDPC code systems though LDPC is still a viable option compared to other code systems The third chapter focuses on how to reliably process and store DNA sequences in EHR systems without any modifications To achieve this the authors introduce a coding technique and evaluate its effectiveness using the Hamming code and Reed Solomon coding schemes on a sample data set The results show that the Reed Solomon coding scheme outperforms the Hamming code in terms of error detection and correction for securely processing DNA records to EHR systems The next chapter investigates the robustness of AI models trained on thyroid ultrasound images using different convolutional neural network CNN architectures VGG19 Xception ResNet50V2 and EfficientNetB2 against adversarial attacks using the fast gradient sign method FGSM basic iterative method BIM and projected gradient descent PGD techniques In the fifth chapter it was questioned whether artificial intelligence could write an academic article In this direction an academic article was created and evaluated by OpenAI ChatGPT The final chapter proposes an application to measure RF signal intensities in urban areas and use that information to estimate the amount of energy that can be harvested from these signals This information is then presented to users through a geographical information system
