Neuroinformatics and Semantic Representations Alexander A. Kharlamov, Maria Pilgun, 2020-04-14 This book proposes an approach to the analysis of information using a neural network based on neural like elements and temporal summation of signals which makes it possible to implement a structural approach to the analysis of information streams Together with associative access to information structural multilevel analysis enables the interpretation of information processing in columns of the cerebral cortex of humans Using representations of information processing in the hippocampus it is possible to re construct the human model of the world and to interpret purposeful behaviour The book describes the procedure for synchronizing the world models of various people allowing automatic semantic analysis of unstructured text information including construction of a semantic network of a text as its semantic portrait **Handbook of Semantic Web Technologies** John Domingue, Dieter Fensel, James A. Hendler, 2011-06-19 After years of mostly theoretical research Semantic Web Technologies are now reaching out into application areas like bioinformatics eCommerce eGovernment or Social Webs Applications like genomic ontologies semantic web services automated catalogue alignment ontology matching or blogs and social networks are constantly increasing often driven or at least backed up by companies like Google Amazon YouTube Facebook LinkedIn and others The need to leverage the potential of combining information in a meaningful way in order to be able to benefit from the Web will create further demand for and interest in Semantic Web research This movement based on the growing maturity of related research results necessitates a reliable reference source from which beginners to the field can draw a first basic knowledge of the main underlying technologies as well as state of the art application areas This handbook put together by three leading authorities in the field and supported by an advisory board of highly reputed researchers fulfils exactly this need It is the first dedicated reference work in this field collecting contributions about both the technical foundations of the Semantic Web as well as their main usage in other scientific fields like life sciences engineering business or education **Semantic Multimedia Analysis and Processing** Evaggelos Spyrou, Dimitris Iakovidis, Phivos Mylonas, 2017-12-19 Broad in scope Semantic Multimedia Analysis and Processing provides a complete reference of techniques algorithms and solutions for the design and the implementation of contemporary multimedia systems Offering a balanced global look at the latest advances in semantic indexing retrieval analysis and processing of multimedia the book features the contributions of renowned researchers from around the world Its contents are based on four fundamental thematic pillars 1 information and content retrieval 2 semantic knowledge exploitation paradigms 3 multimedia personalization and 4 human computer affective multimedia interaction Its 15 chapters cover key topics such as content creation annotation and modeling for the semantic web multimedia content understanding and efficiency and scalability Fostering a deeper understanding of a popular area of research the text Describes state of the art schemes and applications Supplies authoritative guidance on research and deployment issues Presents novel methods and

applications in an informative and reproducible way Contains numerous examples illustrations and tables summarizing results from quantitative studies Considers ongoing trends and designates future challenges and research perspectives Includes bibliographic links for further exploration Uses both SI and US units Ideal for engineers and scientists specializing in the design of multimedia systems software applications and image video analysis and processing technologies Semantic Multimedia Analysis and Processing aids researchers practitioners and developers in finding innovative solutions to existing problems opening up new avenues of research in uncharted waters

Intelligent Asset Management Frank Xing, Erik Cambria, Roy Welsch, 2019-11-13 This book presents a systematic application of recent advances in artificial intelligence AI to the problem of asset management While natural language processing and text mining techniques such as semantic representation sentiment analysis entity extraction commonsense reasoning and fact checking have been evolving for decades finance theories have not yet fully considered and adapted to these ideas In this unique readable volume the authors discuss integrating textual knowledge and market sentiment step by step offering readers new insights into the most popular portfolio optimization theories the Markowitz model and the Black Litterman model The authors also provide valuable visions of how AI technology based infrastructures could cut the cost of and automate wealth management procedures This inspiring book is a must read for researchers and bankers interested in cutting edge AI applications in finance

Towards the Semantic Web John Davies, Dieter Fensel, Frank van Harmelen, 2003-06-13 With the current changes driven by the expansion of the World Wide Web this book uses a different approach from other books on the market it applies ontologies to electronically available information to improve the quality of knowledge management in large and distributed organizations Ontologies are formal theories supporting knowledge sharing and reuse They can be used to explicitly represent semantics of semi structured information These enable sophisticated automatic support for acquiring maintaining and accessing information Methodology and tools are developed for intelligent access to large volumes of semi structured and textual information sources in intra and extra and internet based environments to employ the full power of ontologies in supporting knowledge management from the information client perspective and the information provider The aim of the book is to support efficient and effective knowledge management and focuses on weakly structured online information sources It is aimed primarily at researchers in the area of knowledge management and information retrieval and will also be a useful reference for students in computer science at the postgraduate level and for business managers who are aiming to increase the corporations information infrastructure The Semantic Web is a very important initiative affecting the future of the WWW that is currently generating huge interest The book covers several highly significant contributions to the semantic web research effort including a new language for defining ontologies several novel software tools and a coherent methodology for the application of the tools for business advantage It also provides 3 case studies which give examples of the real benefits to be derived from the adoption of semantic web based ontologies in real world situations As such the book is an excellent

mixture of theory tools and applications in an important area of WWW research Provides guidelines for introducing knowledge management concepts and tools into enterprises to help knowledge providers present their knowledge efficiently and effectively Introduces an intelligent search tool that supports users in accessing information and a tool environment for maintenance conversion and acquisition of information sources Discusses three large case studies which will help to develop the technology according to the actual needs of large and or virtual organisations and will provide a testbed for evaluating tools and methods The book is aimed at people with at least a good understanding of existing WWW technology and some level of technical understanding of the underpinning technologies XML RDF It will be of interest to graduate students academic and industrial researchers in the field and the many industrial personnel who are tracking WWW technology developments in order to understand the business implications It could also be used to support undergraduate courses in the area but is not itself an introductory text
