Frodin, 2001-06-14 This 2001 book provides a selective annotated bibliography of the principal floras and related works of inventory for vascular plants The second edition was completely updated and expanded to take into account the substantial literature of the late twentieth century and

The works covered are principally specialist publications such as floras, checklists, distribution atlases, systematic iconographies and enumerations or catalogues, although a relatively few more popularly oriented books are also included. The Guide is organised in ten geographical divisions with these successively divided into regions and units, each of which is prefaced with a historical review of floristic studies. In addition to the bibliography, the book includes general chapters on botanical bibliography, the history of floras and general principles and current trends, plus an appendix on bibliographic searching, a lexicon of serial abbreviations and author and geographical indexes.

**Evolution and Diversification of Land Plants** Kunio Iwatsuki, Peter H. Raven, 2012-12-06. It is agreed by most scientists that there is a real possibility of mankind's being plunged into crisis around the middle of the twenty-first century because of insufficient crop production to support the explosively increasing world population and because of serious pollution of the global environment. Plants should play the major role in alleviating this crisis. Consequently, plant science will become of crucial importance in the next century. The application of plant science to crop improvement and the production of plants resistant to environmental pollution will be achieved through complete understanding of the basic functions of plants. Fundamental understanding of individual species and the evolution of plants is also important. The Botanical Society of Japan, which was established in 1882, decided to publish a series of special issues of the Botanical Magazine Tokyo, now the Journal of Plant Research. The aim of this series was to present overviews of recent advances in various fields of plant sciences. As a result, the Botanical Society of Japan published *Controlling Factors in Plant Development* in 1978, *Regulation of Photosynthetic Processes* in 1991 and *Cellular and Molecular Biology in Plant Cell Cultures* in 1993. The contributions to these high quality special issues were written by leading international scientists in each field and these publications had a great impact worldwide.

**Contemporary Debates in Philosophy of Biology** Francisco J. Ayala, Robert Arp, 2009-12-07. This collection of specially commissioned essays puts top scholars head to head to debate the central issues in the lively and fast-growing field of philosophy of biology. Brings together original essays on ten of the most hotly debated questions in philosophy of biology. Lively head to head debate format sharply defines the issues and paves the way for further discussion. Includes coverage of the new and vital area of evolutionary developmental biology as well as the concept of a unified species, the role of genes in selection, the differences between micro and macro evolution and much more. Each section features an introduction to the topic as well as suggestions for further reading. Offers an accessible overview of this fast-growing and dynamic field whilst also capturing the imagination of professional philosophers and biologists.
