**Abstract**—This paper serves the purpose of reviewing and summarizing Qualitative research Method and investigating its structure, and different types of Data Collection and Data Analysis methods. A review centric research has been conducted, reviewing existing literature in order to accomplish a basic understanding of the topic and all factors associated within this paper. The research only focuses on the concept of Qualitative research method, and the procedures behind it. Furthermore, we discussed in short four different data collecting methods, and three data analysis techniques. Due to the nature of this paper as a summary paper, it is not possible to cover all data collection and data analysis methods. All data and opinions are collected from 30 different articles, and previous research papers. The results and findings of this paper serve as a brief discussion of existing literature, and this paper maybe applied as a summary reference for students and other learners. This paper represents a new referring article for seekers who are willing to enhance their understanding regarding qualitative research method, and Data collection and Data analysis techniques.

## I. INTRODUCTION

In order to be able to put together a research paper, you need to fully understand what is a research method, how is it structured and the purpose of research methods, both generally, and specialized in any scientific field. Linguistically, and according to Cambridge Dictionary Online, research method is a particular way of studying something in order to discover new information about it or understand it better.

Research is a one type of knowing, Epistemology which is the philosophical theory of knowledge, the philosophy of investigating information in order to categorized it correctly, either under opinions, or beliefs. Epistemology identifies different sources of knowledge which are:

- Intuitive knowledge: Based on belief, faith, and doesn't rely on hard facts
- Authoritative knowledge: Based on information gathered from people in forms of word of mouth or books

- Logical Knowledge: Based on reasoning and advancing from the initial point to the new knowledge point

- Empirical knowledge: Based on demonstrable objective facts, relying on observations and experimentation

Our modern day research use all the four ways of accomplishing knowledge, and lay the basics steps of research, initial idea of research, reviewing previous literature, processing information through certain procedure, and finally finding and conclusions.

Research is well-arranged and systematic way of finding answers and explanations to various topics and questions that one might ask. Research is organized in a sense that there is a certain plan and specific structure that headlines scope of the research. Also, it is systematic because there are a well defined steps and procedures which you have to follow during the research process in order to be able to collect the most precise results, and find the answers the scholar is seeking at the end of the research. Keeping in mind, that research results can be simply a clear statement, hypothesis, or sometimes even a question that believe to be the goal of an extended research paper. With the help of research, we achieve progress in science; we pick up from what other scholars left and move toward advancement. If we have no question to answer, there is no focus in the research, thus there is no use.

Research is basically divided into three basic categorize, which are:

Basic research

Applied research

Practical Research

Basic research is only focusing on the theory, doesn't necessarily yield any practical usefulness. Calvert [1] defines basic research "Basic research is often used in science policy. It is commonly thought to refer to research that is directed solely toward acquiring new knowledge rather than any more practical objective [1] p. 199". In the other hand, applied research is focusing on how we can turn the findings of the research to an applied method of teaching. Lastly, practical research focuses on actually applying the findings to a certain practical teaching situation.

There is cumulative theories and researches about Supply Chain and important factors e.g.[2-11] as the

which examines the interplay between context and method making it invaluable for both the experienced and the beginning researcher. A range of methodological and practical issues central to the concerns of qualitative researchers are addressed. These include the validity and plausibility of qualitative methods, the problems encountered using specific techniques in a range of social settings, and the moral issues raised in qualitative research. These themes are related to practical issues which are illustrated by a breadth of examples and in depth case studies. The contributors look at the methods and strategies that they have used to study everyday life and make suggestions to readers on why and how they might conduct their own studies. They raise issues that go beyond cookbook discussions of issues such as how to enter social settings, manage the subjects of one's research, and ask good questions in the process of formulating research strategies. These issues are addressed within the framework of the larger purposes and uses of qualitative research where specific methodological problems are not used as ends in themselves.

The SAGE Encyclopedia of Qualitative Research Methods Lisa M. Given, 2008-08-19

Qualitative research is designed to explore the human elements of a given topic while specific qualitative methods examine how individuals see and experience the world. Qualitative approaches are typically used to explore new phenomena and to capture individuals' thoughts, feelings, or interpretations of meaning and process. Such methods are central to research conducted in education, nursing, sociology, anthropology, information studies, and other disciplines in the humanities, social sciences, and health sciences. Qualitative research projects are informed by a wide range of methodologies and theoretical frameworks. The SAGE Encyclopedia of Qualitative Research Methods presents current and complete information as well as ready-to-use techniques, facts, and examples from the field of qualitative research in a very accessible style. In taking an interdisciplinary approach, these two volumes target a broad audience and fill a gap in the existing reference literature for a general guide to the core concepts that inform qualitative research practices. The entries cover every major facet of qualitative methods, including access to research participants, data coding, research ethics, the role of theory in qualitative research, and much more, all without overwhelming the informed reader.

**Key Features:** Defines and explains core concepts; describes the techniques involved in the implementation of qualitative methods and presents an overview of qualitative approaches to research; offers many entries that point to substantive debates among qualitative researchers regarding how concepts are labeled and the implications of such labels for how qualitative research is valued; guides readers through the complex landscape of the language of qualitative inquiry; includes contributors from various countries and disciplines that reflect a diverse spectrum of research approaches from more traditional positivist approaches through postmodern constructionist ones; presents some entries written in first person voice and others in third person voice to reflect the diversity of approaches that define qualitative work.

**Key Themes:** Approaches and Methodologies; Arts Based Research; Ties to Computer Software; Data Analysis; Data Collection; Data Types and Characteristics; Dissemination; History of Qualitative Research; Participants; Quantitative Research; Ties to Research Ethics; Rigor; Textual Analysis; Ties to Theoretical and Philosophical Frameworks. The
