Organ, 2007-08-28 Two centuries after the original invention the Stirling engine is now a commercial reality as the core component of domestic CHP combined heat and power a technology offering substantial savings in raw energy utilization relative to centralized power generation The threat of climate change requires a net reduction in hydrocarbon consumption and in emissions of greenhouse gases whilst sustaining economic growth Development of technologies such as CHP addresses both these needs

Meeting the challenge involves addressing a range of issues a long standing mismatch between inherently favourable internal efficiency and wasteful external heating provision a dearth of heat transfer and flow data appropriate to the task of first principles design the limited rpm capability when operating with air and nitrogen as working fluid All of these matters are explored in depth in The air engine Stirling cycle power for a sustainable future The account includes previously unpublished insights into the personality and potential of two related regenerative prime movers the pressure wave and thermal lag engines Contains previously unpublished insights into the pressure wave and thermal lag engines Deals with a technology offering scope for saving energy and reducing harmful emissions without compromising economic growth Identifies and discusses issues of design and their implementation
