Distance Word Problem (Same Direction)

A car leaves a city traveling at 50 km/h. Two hours later, another car leaves the same city traveling at 70 km/h in the same direction. How long will it take for the second car to catch up to the first car?

Solution:

Define the variables:

Let t = time taken for the second car to catch up (in hours).

The time taken for the first car would be $t + 2$ since it has a 2-hour head start.

Set up the table & equation:

Formula: Distance = Rate x Time

	Rate (km/h)	Time (h)	Distance (km)
First Car	50	$t + 2$	$50(t + 2)$
Second Car	70	t	$70t$

When the second car catches up to the first car, both their distances are equal: $70t = 50(t+2)$

Solve the equation:

$$70t = 50(t + 2)$$

$$70t = 50t + 100$$

$$20t = 100$$

$$t = 5$$

Answer:

The second car will catch up to the first car after 5 hours.

English, 2013-04-03 How we reason with mathematical ideas continues to be a fascinating and challenging topic of research particularly with the rapid and diverse developments in the field of cognitive science that have taken place in recent years Because it draws on multiple disciplines including psychology philosophy computer science linguistics and anthropology cognitive science provides rich scope for addressing issues that are at the core of mathematical learning Drawing upon the interdisciplinary nature of cognitive science this book presents a broadened perspective on mathematics and mathematical reasoning It represents a move away from the traditional notion of reasoning as abstract and disembodied to the contemporary view that it is embodied and imaginative From this perspective mathematical reasoning involves reasoning with structures that emerge from our bodily experiences as we interact with the environment these structures extend beyond finitary propositional representations Mathematical reasoning is imaginative in the sense that it utilizes a number of powerful illuminating devices that structure these concrete experiences and transform them into models for abstract thought These thinking tools analogy metaphor metonymy and imagery play an important role in mathematical reasoning as the chapters in this book demonstrate yet their potential for enhancing learning in the domain has received little recognition This book is an attempt to fill this void Drawing upon backgrounds in mathematics education educational psychology philosophy linguistics and cognitive science the chapter authors provide a rich and comprehensive analysis of mathematical reasoning New and exciting perspectives are presented on the nature of mathematics e.g. mind based mathematics on the array of powerful cognitive tools for reasoning e.g. analogy and metaphor and on the different ways these tools can facilitate mathematical reasoning Examples are drawn from the reasoning of the preschool child to that of the adult learner **Directory of**
