We propose the notion that quality is not an attribute or a feature that a product has to possess but rather a relationship between that product and each and every stakeholder More specifically the relationship between the software quality and the organization that produces the products is explored Quality of data that populates the DWH is the main concern of the book therefore we propose a definition for data quality as fitness to serve each and every purpose Methods are proposed throughout the book to help readers achieve data warehouse quality   **DATA WAREHOUSING: CONCEPTS, TECHNIQUES, PRODUCTS AND APPLICATIONS** PRABHU, C.S.R.,2008-08-25 The Third Edition of this well received text analyses the fundamental concepts of data warehousing data marts and OLAP The author discusses in an easy to understand language important topics such as data mining how to build a data warehouse and potential applications of data warehousing technology in government Besides the text compares and contrasts the currently available software tools used to design and develop data warehouses While retaining the six existing case studies it gives four new case studies HARBOR A Highly Available Data Warehouse A Typical Business Data Warehouse for a Trading Company Customer Data Warehouse for the World s First and Largest Online Bank in the United Kingdom A German Supermarket EDEKA s Data Warehouse The book which is a blend of principles and real life case studies is intended as a text for students of B Tech M Tech Computer Science and Engineering B Tech M Tech Information Technology MBA M Sc Computer Science M Sc Information Technology and MCA It should also be of considerable utility and worth to software professionals and database practitioners
