transformation and shared prosperity      *Deploying Artificial Intelligence to Achieve the UN Sustainable Development Goals*  
Arthur Guseni Oliver Mutambara, 2025-07-01 This book provides research insights into how Artificial Intelligence AI can be used to achieve the UN's Sustainable Development Goals (SDGs) 17 interconnected goals designed to address the world's most pressing challenges by 2030. It reviews the SDGs and discusses why progress has been mixed and uneven across different countries, regions, and goals. The book posits that attaining the SDGs will depend on enhanced global cooperation, increased funding, improved infrastructure, public-private partnerships, regional/continental integration, addressing the climate crisis, inclusive economic transformation, and visionary leadership. More specifically, the publication advocates leveraging innovative and transformative technologies, particularly the deployment of AI. The research acknowledges the risks of digital imperialism, data colonialism, and technological exclusion, especially in emerging and least industrialised economies. Hence, in deploying AI to achieve the SDGs, the book puts a premium on decoloniality in AI systems and democratising AI technology. Provides a critique of the current SDGs approach by reframing the goals as a comprehensive risk assessment of humanity's most pressing threats in the 21st century. Features broad and holistic interventions to accelerate the attainment of the SDGs. Provides a comprehensive but accessible introduction to AI concepts and advanced innovations such as AlphaFold, ChatGPT 4, DeepSeek R1, Grok 3, and autonomous vehicles, drones, and driverless cars. Discusses the AI strategies of leading economies and assesses the impact of AI on geopolitics. Provides a comprehensive critique of global AI efforts by the UN and African Union, while proffering alternative paradigms and frameworks. Presents the enablers, drivers, and strategic framework of AI deployment to achieve the SDGs. Develops and presents details of six distinct but related components of a novel Strategic Framework for developing and adopting AI: Vision, Strategy, Policy, Governance, Legislation, Regulations, and Implementation Matrix. Outlines specific ways that AI can be deployed to achieve each of the 17 SDGs and reviews seven countries' experiences. Explores an innovative, forward-looking, and technology-driven framework for equitable global socio-economic transformation to succeed the SDGs post 2030.      **PC World**, 2003      **When the Chips Are Down** Pranay  
Kotasthane, Abhiram Manchi, 2023-11-18 To the world at large, technology was synonymous with software. Within months, the subject of such conversations has changed dramatically. Today, the hardware that runs all software—semiconductors or chips—has become a subject of WhatsApp groups and international politics. The chip shortage during COVID-19 made governments take notice of this complex supply chain. The US began denying advanced semiconductors to Chinese companies. Worsening China-Taiwan relations further intensified the debate. By 2022, China, the US, India, the EU, and Japan had released plans worth billions of dollars for setting up new semiconductor facilities. This book is a comprehensive overview of this meta-critical technology. How are semiconductors important from a geopolitical perspective? Why did the US and Taiwan become powerhouses in this domain while Russia and India fell behind? Is China's semiconductor sector a threat to the world? What are the future trends to watch out for? These are the questions that this book answers.      **ICT and New Media Bridging**
