Notes on Boiler Testing (Classic Reprint) Frederick Grover, 2018-02-07 Excerpt from Notes on Boiler Testing Stokngng T E In crde1 to illustrate the personal element iirtroduced in good and bad stoking we may quote the competition which was carried out at Messrs Davey Brothers of Sheffield Five stokers were made to fire The same boiler with the same coal and with the steam pressure about the same The best stoker was able to obtain an evaporation of 91b Of water per pound of coal the worst evaporation being lb Per pound of coal The difference is here 22 per cent The opportunities afforded for in creasing the efficiency of the boilers Were in this Instance limited A well laid fire which by constant attention is prevented from Burning into holes is one of the chief items in securing a high Evaporation Keeping the fire bars clean and regulating the dampers for a maximum quantity of

air just after firing contributes greatly to high efficiency Beyond these points There is little opportunity for exercising skill in stoking and yet these tests show clearly how very important the simple operations involved in firing a boiler become The very simplicity is one cause for neglect About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Catalogue of the Stirling Water Tube Safety Boiler (Classic Reprint) Stirling Consolidated Boiler Company,2017-12-26 Excerpt from Catalogue of the Stirling Water Tube Safety Boiler Accessibility no other water tube boiler possesses the feature of Accessibility in so marked a degree as the Stirling This statement applies not only to the interior surfaces but to the exterior surfaces as well In most of the water tube boilers and noticeably in some of the nondescript productions that have made their appearance in recent years the tubes are arranged in clusters and as a rule are staggered that is one tube lies opposite the space between two in the next row In the Stirling Boiler the tubes are in rows four deep only and all tubes are laid out in parallel rows It is possible to pass the hand and indeed the whole arm between two rows of tubes and reach those in the fourth or last tier a thing impossible to do in any of the prominent boilers of the horizontal water tube type or in any boiler in which the tubes are staggered this arrangement of the tubes enables the exterior surfaces to be thoroughly cleaned of soot and kindred deposits Such a result can be accomplished only with the greatest difficulty in the case of the staggered tubes common in many other boilers As to the accessibility of the interior surfaces the removal of four man hole plates exposes to view the two ends of every tube in the boiler and for all practical purposes the entire area of the interior heating surface The boiler attendant or cleaner can then enter the drums one by one and remove the mud and other deposits scraping the tubes from end to end if need be using a chain or jointed scraper for that purpose the whole operation being so simple and so easily accomplished that the most ignorant laborer with a few instructions can perform it acceptably About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Boiler Chemistry and Feed Water Supplies (Classic Reprint) James Hugh Paul,2017-10-15 Excerpt from Boiler Chemistry and Feed Water Supplies Although the internal combustion engine may have a much extended future it does not at present compete with

steam in large power plants The steam boiler up to now is by no means a diminishing quantity and any chemical knowledge which will increase its efficiency preserve its life and save coal deserves thought and consideration Coal in the future is most likely to be valued for its chemical products now destroyed in the furnace Coal will have to be economized and one way out of the difficulty will be to remove its valuable volatile products by distillation and use the residual cokes for steam raising purposes This may present difficulties at first but these difficulties are not insuperable and the same skill which has brought the furnace to its present state of perfection will be able to adapt it to the altered conditions If it be more beneficial to the human race to utilize benzole for the manufacture of dyes and drugs than to burn it for raising steam then the valuable benzole will be removed and the carbonaceous residues become the fuel of the future Many of the chemical reactions herein described have been gathered from a long practical experience with high pressure boilers working under varied circumstances and conditions and the analyses given in the text are original analyses made in the course of a somewhat extended practice So far as possible technical language and expressions have been avoided The facts stated and the conclusions drawn have been described in the language of everyday life so that those without more than a very limited acquaintance with chemistry may be able to understand and appreciate the results and a chapter has been added explaining and illustrating such technical expressions as it has been found necessary to use About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Unfortunately most of the books published are highly technical works dealing with what has been done and not with the possibilities of future development This Spells a great danger to initiative which is discounted to a great extent by placing too much reliance on the past rather than encouraging a determined attack on future possibilities A learned professor has gone farther than most in this direction when he asserted that engineers and boiler experts had been fostering wrong ideas in Spite of the fact that extended practice qualified present laws His declaration that the theories accepted and their laws were utterly wrong is a deduction from what his own experiments revealed About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections

Kleinhans, 2017-07-18 Excerpt from *Boiler Construction A Practical Explanation of the Best Modern Methods of Boiler Construction From the Laying Out of Sheets to the Completed Boiler* In presenting this work it is not intended to give a large quantity of theoretical matter which would be uninteresting to the builder nor to give a lot of new untried material The matter which has been compiled for this work represents the most modern practice Only the best and the most rapid methods of the large builders and railroads are given so that one following the line of work which is here laid out will not run behind in these modern days of progress In trying to get this matter together in such shape as to be generally useful it has been deemed inadvisable to illustrate and describe the methods used by the builders of each one of the many prominent boilers now being built for various classes of work And as the different Operations on different makes of boilers are so similar to each other it has been considered best to devote a section to the description of boilers in general Following this the locomotive boiler is taken up in the order in which the matter goes through the shop About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
