Extrusion Processing Technology Jean-Marie Bouvier, Osvaldo H. Campanella, 2014-03-31 Extrusion is the operation of forming and shaping a molten or dough like material by forcing it through a restriction or die It is applied and used in many batch and continuous processes However extrusion processing technology relies more on continuous process operations which use screw extruders to handle many process functions such as the transport and compression of particulate components melting of polymers mixing of viscous media heat processing of polymeric and biopolymeric materials product texturization and shaping defibering and chemical impregnation of fibrous materials reactive extrusion and fractionation of solid liquid systems Extrusion processing technology is highly complex and in depth descriptions and discussions are required in order to provide a complete understanding and analysis of this area this book aims to provide readers with these analyses and discussions Extrusion Processing Technology Food and Non Food Biomaterials provides an overview of extrusion processing technology and its established and emerging industrial applications Potency of process intensification and sustainable processing is also discussed and illustrated The book aims to span the gap between the principles of extrusion science and the practical knowledge of operational engineers and technicians The authors bring their research and industrial experience in extrusion processing technology to provide a comprehensive technical yet readable volume that will appeal to readers from both academic and practical backgrounds This book is primarily aimed at scientists and engineers engaged in industry research and teaching activities related to the extrusion processing of foods especially cereals snacks textured and fibrated proteins functional ingredients and instant powders feeds especially aquafeeds and petfoods bioplastics and plastics biosourced chemicals paper pulp and biofuels It will also be of interest to students of food science food engineering and chemical engineering Also available Formulation Engineering of Foods Edited by J E Norton P J Fryer and I T Norton ISBN 978 0 470 67290 7 Food and Industrial Bioproducts and Bioprocessing Edited by N T Dunford ISBN 978 0 8138 2105 4 Handbook of Food Process Design Edited by J Ahmed and M S Rahman ISBN 978 1 4443 3011 3

Enhancing Agricultural Water Management: Techniques for Improving Crop Water Efficiency and Sustainability Qi Wu,Junying Chen,Emmanuel Arthur ,Hanmi Zhou,2025-08-22 Research on crop water requirements is pivotal for precision irrigation and agricultural water conservation Various farm management techniques such as deficit irrigation with optimized water allocation various irrigation methods sprinkler drip and micro sprinkler irrigation and biological water saving technologies significantly influence the pattern of crop water demand The application of these technologies exhibits spatial variability For example water use efficiency at the field scale might exceed that at the irrigation district scale where irrigation practices are more precision oriented thereby affecting

water use efficiency from a broader perspective Understanding and applying advanced water management techniques enables farmers to adjust their practices for more efficient water use ultimately leading to more resilient and sustainable agricultural practices Therefore it is crucial to study the impact of various agricultural irrigation and fertigation techniques on crop water demand water physiology and water use efficiency to enhance crop resistance to water shortage and improve water use efficiency The objective of this research topic is to explore the impacts of varying water and fertilizer management strategies particularly with the integration of innovative technologies across different scales on crop water demands water related physiological functions crop growth dynamics and their role in enhancing crop resilience This investigation will cover the extensive physiological adaptations of crops to these strategies examining the consequences of diverse irrigation and fertilization coupling modes at the field level on crop water use and physiological functions alongside the evaluation of crop water related physiological processes at the irrigation district magnitude This Research Topic aims to report recent breakthroughs in the deployment of novel water and fertilizer management strategies or models within plant sciences Authors are welcome to submit related to but not limited to the following topics Response mechanisms of crops to novel water and fertilizer management technologies Physiological responses of crops to water productivity under deficit irrigation Variability and precise control of crop water efficient utilization at large scale Impact of coupled water and fertilizer management on soil crop interactions Impact of changing weather patterns on crop water and nutrient requirements Implementation of smart farming technologies in water and fertilizer application Water use efficiency and irrigation practices Models for managing water and fertilizer
